# MICROBIOLOGICAL EXAMINATION OF COASTAL WATERS IN THE NORTH WEST

## INTRODUCTION

A microbiological survey was undertaken in September 1998 as a continuation of monitoring the offshore bathing waters in the North West (see previous reports MSP-96-005 and MSP-96-014). None of the points sampled are designated bathing waters under the EC bathing directive 1975 (76/160/EEC), but it was considered appropriate to use the *mandatory* and *guideline* values given in the directive to classify the results.

## SURVEY

The samples were collected over two days and in four stages so laboratory analyses could be undertaken within the six hour limit protocol.

Skinburness to Whitehaven	2 September 1998
Whitehaven to Fleetwood	2 September 1998
Fleetwood to Mersey	2 September 1998
Great Orme to Mersey	3 September 1998

A survey track identical to previous surveys was undertaken to maintain consistency for data set comparison (See Map 1). This was between 0.25 and 1 mile offshore to include recreational waters (eg. jet skiing and windsurfing).

Samples were taken by courier to *Preston Public Health Laboratory* for analysis of **presumptive faecal coliform**, **presumptive total coliform** and **presumptive faecal streptococci**.

## RESULTS

The Bathing water directive stipulates mandatory and guideline bacterial values for the water samples undertaken. See Table 1.

per 100ml	Mandatory	Guideline
Total coliform	<10 000	<500
Faecal coliform	<2 000	<100
Faecal streptococci		<100

**Table 1.** Mandatory and Guideline bacterial values.

**Table 2** lists all the sites that exceed the mandatory or guideline figures.

**Table 2.** Sites exceeding Mandatory and Guideline values.

**Appendix 1** contains data used in *all* the graphical presentations while **Appendix 2** contains data used in Figures 5 – 8.

### DISCUSSION OF RESULTS

#### *Skinburness – Whitehaven (See Figure 1.)*

Most of the values along this stretch are quite low. However, guideline values for Total Coliform and Faecal Coliform were exceeded at *Workington*, *Cunning Point*, *N. Whitehaven* and *Marchon*. *Maryport* and *Flimby* exceeded the guideline values for Faecal Coliform only. *N. Whitehaven* exceeded guideline values for both Total and Faecal Coliforms quite significantly – as much as ten and twelve times the guideline value respectively.

## MICROBIOLOGICAL EXAMINATION OF COASTAL WATERS IN THE NORTH WEST

This year has seen an *increase* in the number of sites with *guideline* failures compared with previous surveys (*See Figure 5*) and although Marchon exceeded guideline values for both Total and Faecal Coliforms, levels were significantly lower than previous years.

No sites exceeded guideline values for Faecal Streptococci.

### *Whitehaven - Fleetwood (See Figure 2.)*

Again, most of the values along this stretch are quite low. However, guideline values for Total Coliform and Faecal Coliform were exceeded at *Marchon* and *Egremont* while at *Ravenglass*, the Faecal coliform guideline level was exceeded only.

Compared with 1996, this year has seen an *increase* in the number of sites with *guideline* failures. However, compared with 1995 nearly all the sites along this stretch exceeded guideline values in that year (*See Figure 6*).

No sites exceeded guideline values for Faecal Streptococci.

### *Fleetwood - Mersey (See Figure 3.)*

The majority of the values along this stretch are quite low with the exception of the sites that approach the Mersey Estuary. Guideline values for Total Coliform, Faecal Coliform and Faecal Streptococci were exceeded at *C21* and *Tower*. *Tower* also exceeded the **MANDATORY** limit for Faecal Coliform. Guideline values for Total coliform and Faecal Coliform were exceeded at *C17*.

This year as shown little change with regards to the number of sites which exceed guideline values. (*See Figure 7.*)

### *Gr Orme - Mersey (See Figure 4.)*

The majority of the values along this stretch are quite low with the exception again of the sites that approach the Mersey Estuary. Guideline values for Total Coliform and Faecal Coliform were exceeded at *Mockbeggar* and *Rock Lighthouse*. *Rock Channel* exceeded the guideline value for Faecal Coliform only.

Again, this year as shown little change with regards to the number of sites which exceed guideline values. (*See Figure 8.*)

No sites exceeded guideline values for Faecal Streptococci.

## MICROBIOLOGICAL EXAMINATION OF COASTAL WATERS IN THE NORTH WEST

### CONCLUSION

Generally, *more sites* along the North West and North Wales coastline *exceeded guideline values* compared with the survey carried out in 1996. There were no sites that failed the mandatory limits for Total Coliform and Faecal Streptococci, however, one site exceeded the mandatory limit for Faecal Coliform - TOWER. This could be due to the close proximity of one or more effluent outfalls found on the approach to the Mersey Estuary. Tower did not exceed these limits in 1996.

The high bacterial values found at Maryport, Workington and Marchon were expected as various outfall pipes exist in these areas. Although Marchon exceeded the *mandatory* limit for Faecal Coliform in 1996, this year has shown a significant improvement in the bacteria levels found at Marchon (although they still exceeded the guideline values for Total and Faecal Coliforms). In contrast Whitehaven exceeded guideline values quite significantly compared with previous years.

The expected high bacterial levels found at C17, C21 Rock Lighthouse and Tower can be attributed to the effluent outfalls into the Mersey and while Gt. Orme has shown an improvement in the levels of bacteria in 1998, at Mockbeggar levels have *increased* compared with previous years.

Although this report contains only a very brief summary or 'snapshot' of related information it is intended to serve as no more than a very preliminary review, drawn from a limited dataset. However, even though none of the points sampled are designated bathing waters under the EC Bathing Directive 1975 (76/160/EEC), the results should not be taken with complacency and used in context with the wide-ranging picture.
