Hydrometric Asses
Database

WELSH REGION WATER RESOURCES HYDROMETRIC ASSET DATABASE

1. Background

Welsh region have for several years held information relating to Water Resources fixed and mobile assets on a Dataease database. The database is used both by area and regional staff and is used for SLA and gauging stations classification however some drawbacks to the system include being PC based, limited accessibility, maintenance and software support. During 1996 it was decided to migrate the database to a networked, windows platform/database which would allow multi-user and multi-site access. This would increase data accessibility, use of the system, improve asset management particularly with the potential to be linked to a mapping tool.

2. Progress to Date

A contract was let in October 1996 to document the existing system and develop a functional specification for the migration of the database from Dataease to a windows database. The aim was to migrate the system with very little change to the functionality or data storage. Once the database was established on a new system future developments would include changes to functionality etc. Inevitably some database structural changes would be necessary due to the differences between Dataease and another windows database. The draft functional specification is now complete. The next stage was to go on to the actual migration however year 2000 and convergence issues need to be resolved.

3. More on the Database

A myriad of information relating to both fixed (e.g River Flow Gauging stations) or mobile (e.g. loggers) assets is stored within the database. Repair and maintenance information for river flow monitoring stations, utilities (e.g. phone accounts) and reporting facilities are also built into the database.

Fixed assets include - River Flow Monitoring stations (level and flow), Rain Gauge stations, Groundwater stations, Spot Gauging sites, Reservoirs, stores, staff gauges.

Mobile assets include - loggers, sensors, current meters, winches, cableways, dippers, batteries, diptones, vodaphones etc.

As an example some of the information stored for a fixed asset e.g. River flow monitoring stations includes:

- river name, fresh/tidal ratio, catchment area, Hydro reference number, distance from river mouth, measurement structure, centre crest/channel height, crest tappings, zero staff gauge height u/s and d/s, bankfull stage, ordnance datum, NGR of OD, Cartesian reference of OD, local datum, NGR of local datum, description of local datum, channel width, channel length, fixed frequency, no. of rating equations, time series (fresh/tidal), autographic chart, telemetry, alarms, daily mean flows, river temperature, temperature chart, fish counter, fish pass, level class, date entered, date last modified etc.

Jennifer Taylor, 2/9/97.

Hyrometric Asset Database Design Specification

5.1 EXISTING DATAEASE DESIGN	155

1 Introduction

1.1 General

The purpose of this specification is to detail the requirement for a Microsoft Windows based database application for the Welsh region of the Environment Agency to replace the existing database currently running under DOS and Dataease.

1.1.1 Reason for making the change

This specification is intended to detail the migration of a DOS based database to a windows based one. It is not therefore intended to be a "re-design" or "new development". However, certain changes will be introduced where areas have not been implemented previously due to the cumbersome nature of that area. The windows version of the database should be more maintainable and very much more user friendly, making the product available to more people.

1.2 Sources of information / Cross references to other documents

When reading this document please refer to the following sources:

Source	Title	Version
Document	Hydrometric Assets Database Users Guide	1.0 Rev 1.00
Database	Water Resources Hydrometric Assets Database	2.00
Underlying Database	Database and Engine	Ver 4.53

The discussions which form the basis of this specification took place with the Water Resources department of the South East area in St Mellons, Cardiff.

1.3 Scope and overview of application

1.3.1 Purpose of the Software

The software is generally intended to create and maintain a database of all aspects of Water Resources which have had money invested in them, among these are:

- Buildings in the field & structures (not necessarily owned)
- Monitoring Systems
- Building Maintenance (Weirs, Monitoring Systems, equipment etc)
- Staff (People taking readings etc)
- Utilities (Electricity and Phones for Telemetry System etc)

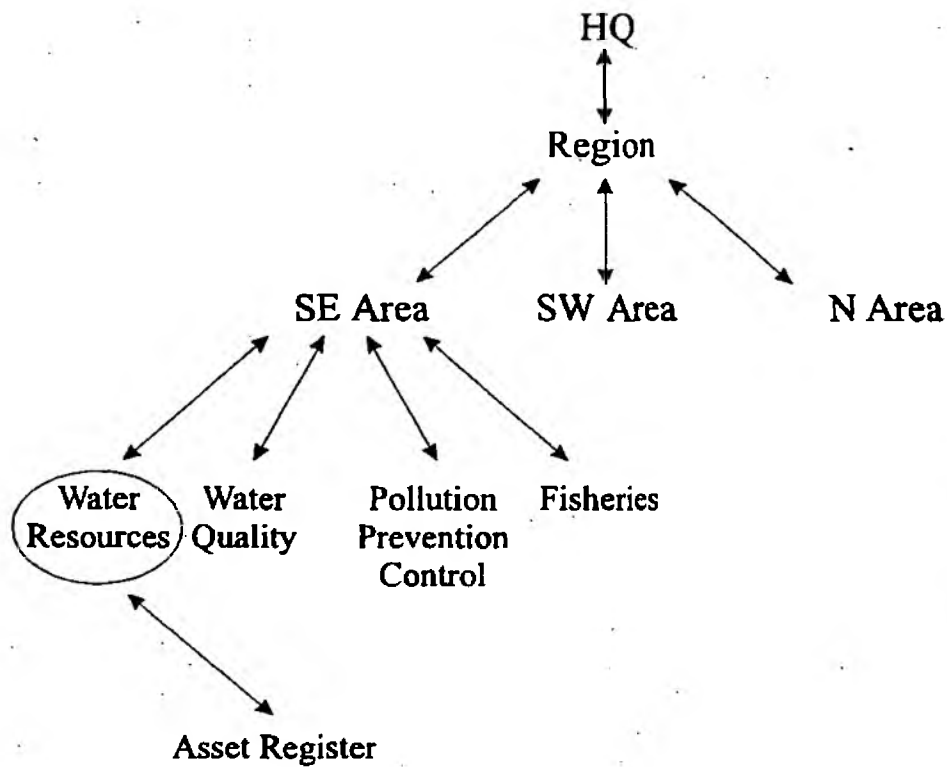

1.3.1.1 Scope of the Database

The Environment Agency is a National Agency, with the basic structure as follows:

The existing Database design covers the Welsh Region Water Resources department of the Environment Agency.

The Welsh Water Resources departments and how the asset register relates to their activities is shown more clearly as follows:

The following map shows the area covered by the Welsh region.

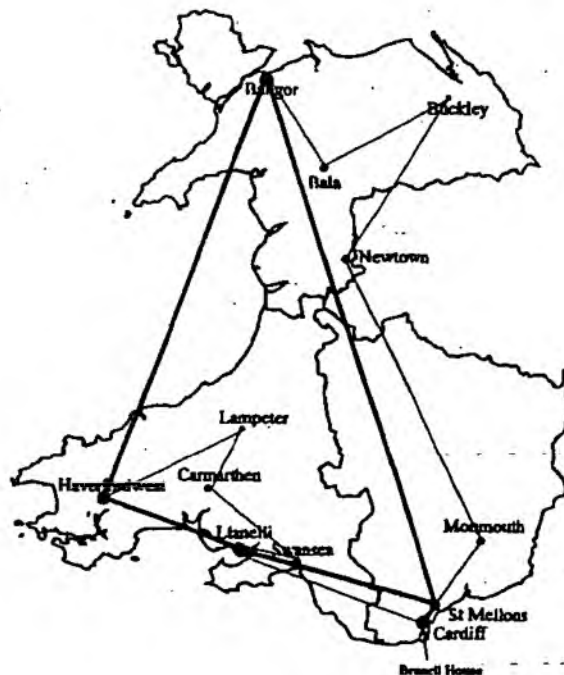

The Welsh region is split up into three areas, the North, South West and South East areas. These are shown in the following map:

1.3.2 Network Topology

As the areas within Wales are connected by a Wide Area Network, then the Database will be operating on this WAN. The following map shows the connection of the 3 areas within the Welsh region:

1.3.2.1 User Access

The software is intended to be used within each area of the Welsh Region Water Resources with access to change the database as follows:

- One Database per Area
- Regional access of all 3 databases over the WAN (Via a copy)
- One user per area with create / write access
- Each area has LAN access for read / reports

Thus a Database client server configuration is not required, as only one person in each area will need write access to the database. In operation the database will not need multi-user access, as only one person will have access to the database for write at any one time on any site.

Read access for other users in the region may be achieved by using a daily (or less often if preferred) copy to each site which could be performed overnight to prevent disruption.

1.4 Development / Run time environment

This Specification is not intended to define either the Run time or Development Environments for the database, but to define the front-end (Windows, forms and menus) and the underlying database structure. Many of today's solutions will be capable of operating within these constraints and it is simply down to the Environment agency to choose the tools which fit within the criteria set by the IS department and potential managers and users of the software.

The forms that follow have been developed in the screens which follow have been created in a Delphi Prototype, with no underlying database structure. Some of the forms may need further refinement to make use simpler or more obvious but this would be a natural progression once the database design was underway.

1.5 Software General Overview

1.5.1 Software Platform

The Software is intended to be Microsoft Windows (Version 3.1 or Workgroups 3.11) hosted, each copy running on a P.C. with a good level of performance, and Network access as described above.

1.5.2 Software background

The business of the water resources department is, amongst other things, to measure levels and flows of rivers and water storage's to ensure that supply and the environment are not adversely affected by over use or floods etc.

To this end, equipment is installed within the catchment area of a river to monitor rainfall (using raingauges) and riverflow (using river flow monitoring stations) and levels (using boreholes). Other measurements may also be made and are dealt with in a similar manner to those just mentioned.

To assist in understanding the use of assets within the catchment area of a river the following picture shows possible examples of installed equipment:

The water resources department requires the software to easily allow entry of two main kinds of assets, these are:

- FIXED ASSETS
- MOBILE ASSETS

A fixed asset is one where land or construction is involved (Such as a weir) and a mobile asset is where something can be installed (Such as a datalogger). As the above illustration shows, there will always be some land or building works associated with each piece of measurement equipment, and in some cases there will be several pieces of equipment at the same site.

The database is intended to contain all the relevant information about the fixed and mobile assets as well as associating certain assets with others.

For example a datalogger can have one sensor actively connected at any one time but may have another sensor associated with it but inactive. The database should allow the inactive sensor to be made active and visa versa whilst keeping the association.

Fixed assets are maintained within the database and again can be in use or not (rain gauge sites for example may not be in use but can be brought into use as required).

Mobile assets (such as rain gauges) are associated with the fixed assets so that it is known which measurement equipment is where.

The existing database uses a fairly large menu structure to enter individual assets (fixed and mobile) and then links are made from one to the other to indicate the associations.

2 Functional Specification

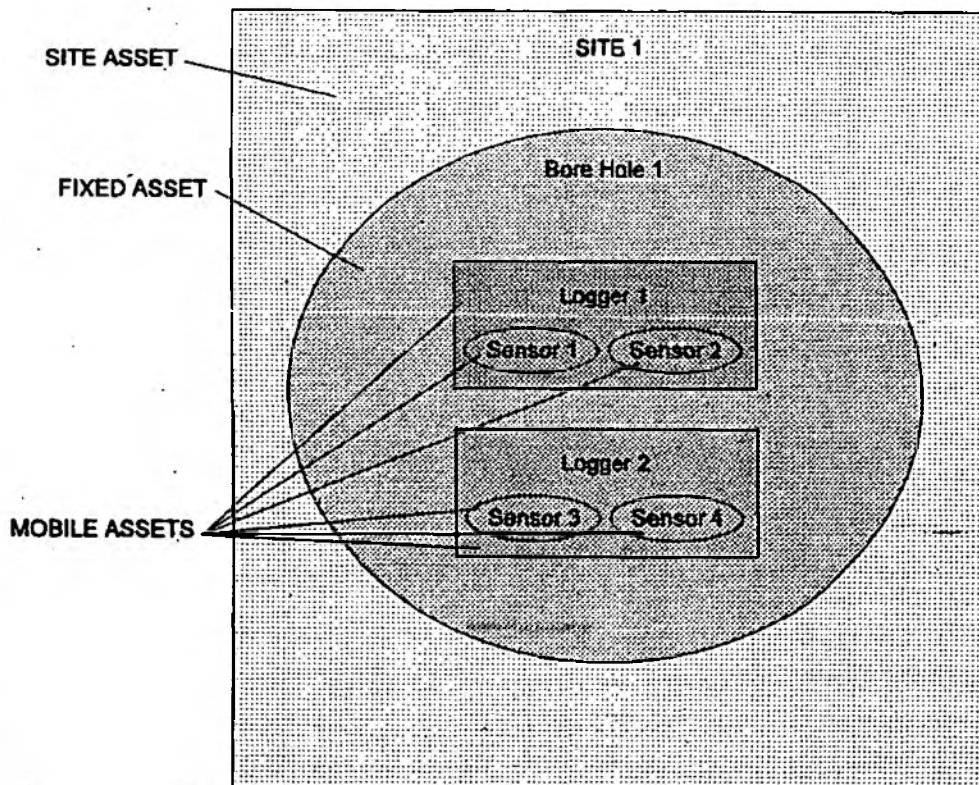

2.1 Functional Requirements

The functional requirements of the windows based software is to make the entry of the asset database information as simple and "obvious" as is possible with such a complex data structure.

To this end, an additional kind of asset has been introduced to simplify the user's access to the links and associations of asset types. This asset is called a SITE ASSET.

The basic principle is that a site asset contains data about a physical site within that geographical area which contains one or more (usually one) fixed asset. Each fixed asset itself can then contain mobile assets. In certain cases, these mobile assets can contain other mobile assets (such as a logger, which has sensors attached).

To illustrate this the following picture shows an example site:

To help to simplify this concept and to provide a more familiar feel to the windows user, the user is encouraged to consider a "tree structure" for a site asset, with sub-entries as the assets that are contained within each asset.

Thus the following tree would be equivalent to the above illustration:

As can be seen this allows for simple and obvious links from one kind of asset to another and also does not digress far from the requirements of the underlying existing database.

In addition to this, the grouped asset which was not previously implemented will also be available by using this approach.

2.2 Overall approach to the Database Software

The intention of this specification is to lay down fairly detailed guidelines for the implementation of the software (although not down to the actual language to be used) as some lengthy discussions have been had covering the possible approach to the user screens and the underlying database requirements.

At the time of actual design, further improvements in structure and clarity may be made, although it is not expected that any major changes would be required.

The approach used for the software is one where the menus of the existing DOS software are replaced by a GUI (Graphical user interface) front end, using point and click operation to access the forms to enter or modify the database.

In addition to this, each copy of the software will be configurable (by use of an INI file or similar) to allow default fields for items such as area, region and access level (ie: items which rarely change when using the database on any one PC).

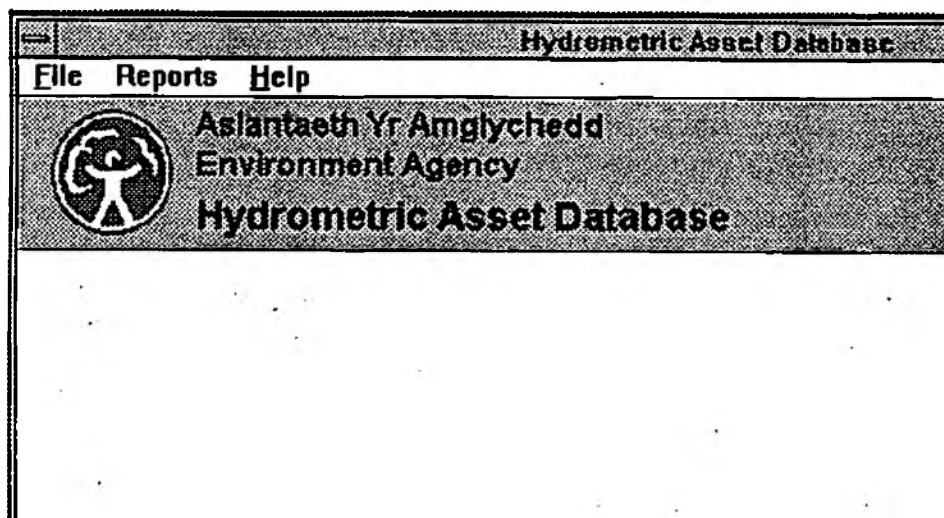

Where simple look ups are used within forms these are stored in look up tables to allow for easy addition of items within these lists. The software is intended to have forms dedicated to maintaining these look up tables.

Note that within this documentation "lut" prefixing a name is used to denote a look up table.

2.3 User Interface

The user interface would be an MDI parent window with some menu facilities such as loading other areas databases etc, with the majority of user interaction via windowed menus and forms within.

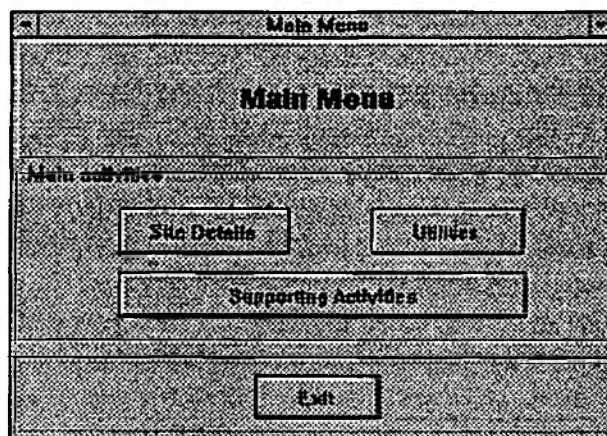

The following screen grab shows the main MDI parent with Windows Menus added:

2.3.1 Menus

2.3.2 Main Menu

The Main Menu screen (Centred within the MDI Parent area) would be presented to the user on running the application and would take the following format:

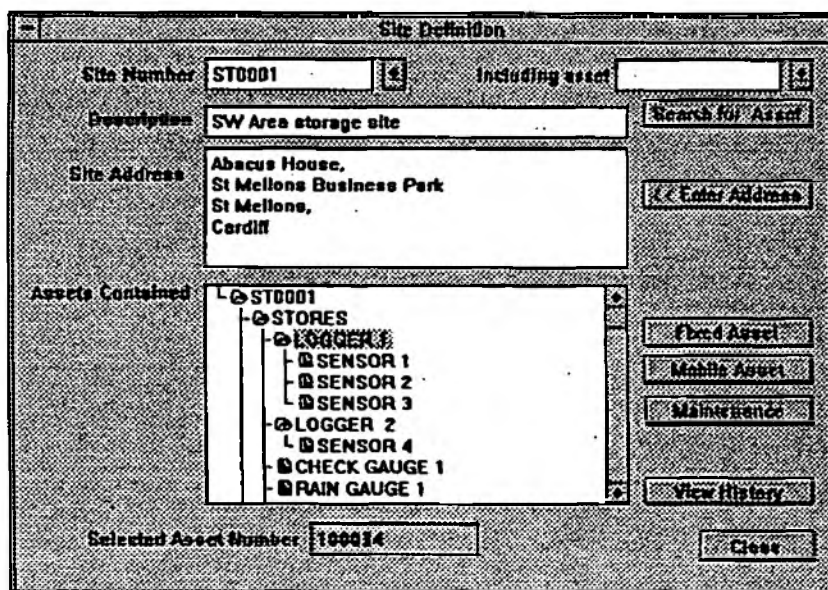

The Main Menu screen is a window titled "Main Menu". It features a central area with three buttons: "Site Details", "Utilities", and "Supporting Activities". Below these buttons is an "Exit" button. The window has a standard Windows-style title bar and a menu bar.

To navigate menus and forms the user would simply click with the mouse on each menu button. This will give access to the majority of the Asset database.

2.3.2.1 Site Details

To add a new site or modify an existing site the following form is presented following clicking on site details:

The Site Definition form is a window titled "Site Definition". It contains several input fields and buttons. The "Site Number" field is set to "ST0001". The "Including asset" field is empty. The "Description" field is set to "SW Area storage site". The "Site Address" field is set to "Abacus House, St Mellons Business Park, St Mellons, Cardiff". The "Assets Contained" list shows a tree structure with "STORES" expanded, showing "LOGGER 1", "SENSOR 1", "SENSOR 2", "SENSOR 3", "LOGGER 2", "SENSOR 4", "CHECK GAUGE 1", and "RAIN GAUGE 1". The "Selected Asset Number" field is set to "100014". Buttons include "Search for Asset", "Enter Address", "Find Asset", "Mobile Asset", "Maintenance", "View History", and "Close".

To use the Site definition, the user can select either Site, Fixed or Mobile asset and the buttons on the right hand side will be enabled / disabled / changed accordingly to allow the addition of the relevant type of asset.

For example, if a new site was to be added (the default operation mode) then a new site number would be created automatically (in sequence) and the site number would appear in the tree view window. By selecting this "top of tree" item, the "New fixed asset" or "Add fixed asset" buttons would be the only options available on the right hand side (All Sites contain fixed assets only). Pressing this button would cause the fixed asset form to be loaded with a unique asset number automatically created. When the fixed asset is fully created, the user can then close the fixed asset definition and will return to the site definition form, where the fixed asset will appear on the tree-view. Clicking on this fixed asset will allow mobile assets to be added (enabling the New Mobile Asset / Add mobile asset buttons on the right). Once the mobile asset has been created / associated with this fixed asset, the user can then associate further mobile assets to this mobile asset if required allowing for the "Log-Link-Sensor" relationships required. Certain laws govern the relationships of items such as sensors to loggers which may need further message boxes or forms to allow only one active logger / sensor per fixed asset. This level of detail is intended to be done at design level due to inherent complexity of the relationships.

The site itself carries additional details such as description, address, occupier etc.

The database program would create a new site number sequentially following the last number to be used, or the user could select another site by using the dropdown combo-box or the up/down keys to navigate previous entries.

The Site description is a text field which allows the user to describe the site.

2.3.2.1.1 Site Address

The site address is entered / loaded by pressing the address button.

The add / change address form will appear as follows:

Add or Modify Address	
Address Details	
Occupier details	
Occupier	NRA Welsh Region - Water Resources
Address	Abacus House St Mellons Business Park St Mellons
Town / City	CARDIFF
County	South Glamorgan
Postcode	CF3 0LT
Tel	
Fax	
Address Type	Site
Contact Details	
Occupier Name	Martin Richards / Huw Cuddihoe
Occupier	Water Resources (SE Area)
Tel	01222 770088
Fax	01222 798555
Internet	simon@regent-design.co.uk
Computer	100304, 2507
Search Update Close	

The following describes the usage of fields on the address form:

Occupier

Unrestricted text field of up to 50 characters. The name relating to the address, such as a company name.

Address

Unrestricted text of 3 lines by 50 characters for the postal address

Town / City

Unrestricted text of 30 characters for the town or city name.

County

Unrestricted text of 30 characters for the county name

Postcode

Unrestricted text of 30 characters for the postcode

Tel

Unrestricted text of 30 characters for the phone number of the address.

Fax

Unrestricted text of 30 characters for the fax number of the address.

Address Type

A list box of a database lookup table of address types (Manufacturer, supplier etc) (See lutAddressTypes)

Occupier name

Unrestricted text of 50 characters giving the contact name for the above address

Occupier

Unrestricted text of 40 characters giving a description of the occupier such as owner.

Tel

Unrestricted text of 30 characters for the phone number of the contact.

Fax

Unrestricted text of 30 characters for the fax number of the contact.

Internet

This a unrestricted text field of 45 characters for the Internal email address.

Compuserve

This is a unrestricted text field of the compuserve address number. (Where applicable)

Once the address has been updated, the Update and Close buttons should be pressed.

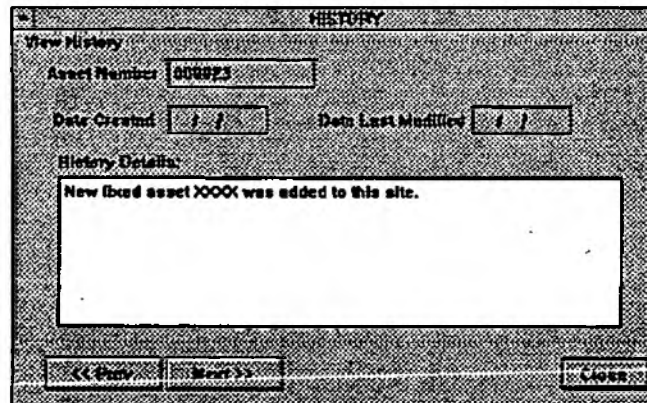

The user should then select which fixed assets (from the left hand list box) are installed within this site.

2.3.2.1.2 View History

The database stores the history of changes to its tables, generated by asking the user for summary details of each change.

This is viewed by selecting the asset in the site definition form with the mouse, and then pressing the history button (Site, Fixed or Mobile assets carry their own history).

By selecting each member asset (Site, Fixed or Mobile) in the tree view shown, it is possible to view the history. By pressing the View History button, the following form will appear:

View History

Asset Number: 000023

Date Created: 1 / 1 Date Last Modified: 1 / 1

History Details:

New fixed asset XXXX was added to this site.

<< Prev Next >> Close

Pressing the next and previous buttons will show chronologically ordered history entries for that Asset.

2.3.2.1.3 Fixed Assets

As described above the user must add a fixed asset to the site before mobile assets can be added or associated with it.

2.3.2.1.3.1 Fixed Asset Main Entry

Register Fixed Assets				
Fixed Assets	Address Detail	Time Detail	Capital Detail	Linkages
Region	Welsh		Area	South Eastern
Asset Type	RFMS			
Asset Number			Search	Regional Inventory Asset Number
Asset Description				
Grid reference	SO XXXX-YYYY	Cartesian	????????	Status
E.A. Reference		Old NRA Ref		National Ref
Catchment Ref		Catchment Description		
Commission Date	1/1	Modified Date	1/1	
Asset Ownership	E.A.	Data Ownership	E.A.	Record Validated
RFMS Additional Information				
			Update	Clear

Region

This is a drop-down list box with a database lookup (lutAgencyRegions).

Area

This is a drop down list box with a database lookup (lutAgencyAreas).

Asset type

This is a drop down list box with a database lookup (lutAssetTypes).

Asset type Description

Next to fixed asset types are the fixed asset type descriptions also a database lookup (lutAssetTypes). (The description is looked up from the "lutAssetTypes" lookup table whenever an asset type is selected and automatically displayed.)

Asset Number

The asset number is calculated from a unique number (the next fixed asset record number) according to the following rules:

The asset seed is obtained from the areas look up tables (lutAgencyAreas)

Regional Inventory asset number

This number is a unrestricted text field and may be entered in addition to the uniquely generated asset number.

Asset Description

This unrestricted text field allows the user to describe the asset in detail. 120 Characters.

Grid Reference

This is the OS Grid reference for the fixed asset. The Cartesian grid reference should be updated from this entry according to a predefined formula.

The Environment Agency will provide this information

Cartesian Grid Reference

This is the Cartesian Grid reference for the fixed asset. The grid reference should be updated from this entry according to a predefined formula.

The Environment Agency will provide this information

Status

This is the status of the fixed asset (Such as active, open, closed etc) This is a database look up table (lutStatus).

EA Reference

This is the unique reference calculated from the asset number the region and area according to the following rules:

Old NRA Reference

This unrestricted text field is the number previously used by the National rivers authority, prior to the formation of the Environment agency.

National Reference

This unrestricted text field is national reference number for the fixed asset (if required).

Catchment Reference

The catchment reference is obtained from a drop-down list box from a database lookup table. (lutCatchmentAreas).

Catchment Description

The catchment reference is obtained from the catchment reference from a database lookup table. (lutCatchmentAreas).

Commission Date

This unrestricted date entry is obtained from the commissioning date for the asset.

Modified Date.

This is the date that the record was last changed. It is not an editable field.

Asset Ownership

Database lookup table - EA or Other currently. (See lutAssetOwnership)

Data Ownership

Database lookup table - EA or Other currently. (See lutAssetOwnership)

Record Validated

Simply a boolean (Yes/No) to indicate that the record has been checked by someone.

2.3.2.1.3.2 Fixed Asset Address Tab

By clicking on the Address details Tab on the Fixed asset entry form, the user can enter or view the address which has been allocated for this asset. Note more information is available in the address than shown on the address Tab such as contact name and Email addresses.

The screenshot shows a web form titled "Register Fixed Assets" with five tabs: "Fixed Assets", "Address Details", "Value Details", "Capital Details", and "Usage". The "Address Details" tab is active. The form contains the following fields:

- Asset Description:** A large text area.
- Occupier:** A text box containing "NRA Welsh Region - Water Resources".
- Address:** A text box containing "Abacus House", "St Mellons Business Park", and "St Mellons" on separate lines.
- Town / City:** A text box containing "CARDIFF".
- County:** A text box containing "South Glamorgan".
- Postcode:** A text box containing "CF3 0LT".
- Tel:** A text box.
- Fax:** A text box.
- Details / Change Address:** A button.
- RFMS Additional Information:** A text box.
- Update:** A button.
- Close:** A button.

Clicking on the Details / Change of Address button the user can enter or define a new address to use. (See Site Address form described above for the address entry form). (See tableAddresses.)

2.3.2.1.3.3 Fixed Asset Terrier Details Tab

By Clicking on the fixed asset terrier details TAB the following form will appear:

The screenshot shows a software window titled "Register Fixed Assets". It has five tabs: "Fixed Assets", "Address Details", "Terrier Details" (which is selected), "Capital Details", and "Linkages". The "Terrier Details" tab contains the following fields and controls:

- Asset Description:** A text input field.
- Land Description:** A text input field.
- either:** A label for the first set of fields.
- Deed Reference Number:** A text input field.
- Finance Asset Number:** A text input field.
- or:** A label for the second set of fields.
- Tenure:** A text input field.
- Lease Expires:** A date input field.
- Rental Costs £:** A text input field.
- Rental Details:** A section containing:
 - Month when rental due (first day of):** A dropdown menu with "January" selected.
 - Rental review date:** A date input field showing "1 / 1".
- Station Description:** A text input field.
- Date Entered:** A date input field showing "1 / 1".
- Date Last Modified:** A date input field showing "1 / 1".
- AFMS Additional Information:** A button.
- Update:** A button.
- Close:** A button.

"Terrier Details" means the details relating to the land for the fixed asset, such as rent, deeds etc.

The fields on the form Tab are as follows:

Asset Description

A text field which serves to remind the user of the asset being edited - Non editable field.

Land Description

A text field which allows the user to enter the description of use of the land.

Deed Reference number

Unrestricted text - 20 characters - The reference number for any deeds to the land - Once this field is filled in, the rental fields should all be greyed out.

Finance Asset Number

Any finance related to this asset will have a finance asset number - these are entered here. Once this field is filled in, the rental fields should all be greyed out.

Tenure

Unrestricted text field - 20 characters. Any details about rental should be entered here. Once this field is filled in, the ownership fields should all be greyed out.

Lease expires

A unrestricted Date field - The date the lease will expire.

Rental costs

The cost of the land rental is entered here. The amount paid in annual rental.

Month rent is due

This is a form look up value and is selected from a list box of months (January to December).

Rental review date

A unrestricted Date field - The date the rental is due for a review

Station description

A unrestricted multi-line text edit field (Memo field) Up to 500 characters can be entered here.

Date entered

An un-editable field for when the terrier details were first entered.

Date last modified

An un-editable field for when the terrier details were last modified

2.3.2.1.3.4 Fixed Asset Capital Details Tab

The next Tab on the fixed asset registration form is the capital details tab. These details allow the user to enter details relating to the cost / value of the fixed asset.

When the user clicks on the Capital Details tab the following form will be produced:

The screenshot shows a software window titled "Register Fixed Assets". It has five tabs: "Fixed Assets", "Address Details", "Terrier Details", "Capital Details" (which is selected), and "Linkages". The "Capital Details" tab contains the following fields and controls:

- Asset Description:** A large text area for describing the asset.
- Original Cost £:** A numeric input field.
- Asset Life:** A numeric input field with "Years" as a unit.
- Departmental contributor:** A text field.
- Percentage Contribution %:** A numeric input field.
- Table of contributors:** A table with two columns. The first column is labeled "Table of contributors" and the second column contains the value "25".
- Comments:** A large text area for additional notes.

At the bottom of the form, there is a button labeled "RFMS Additional Information" and two buttons labeled "Update" and "Clear".

Asset Description

This is an un-editable field which reminds the user of the asset being edited.

Original Cost

This is an unrestricted entry cost field (in pounds).

Asset Life

This is an un-editable field showing the asset life. The life of the asset is obtained from the asset type lookup table (lutAssetTypes)

Departmental contribution table.

The following entry is a table of Departmental contributors versus percentage contribution. Departmental contributors is a database lookup table of those departments which may contribute to the costs of fixed assets. Percentage contribution is an unrestricted percentage field (to the nearest percent). (See lutDepartmentalContributors)

Checking will be applied to the total percentage in the table to ensure 100% is covered.

Comments

This is a 120 character memo / text field which allows any further comment on the capital aspects of the fixed asset to be made.

2.3.2.1.3.5 Fixed Asset Links Tab

The next Tab on the fixed asset registration form is the link details tab. These details allow the user to enter details relating to any associated mobile assets, such as River Flow Gauges, loggers etc.

When the user clicks on the Link Details tab the following form will be produced:

The screenshot shows a software window titled "Register Fixed Assets". It contains five tabs: "Fixed Assets", "Address Details", "Link Details" (which is the active tab), "Capital Details", and "Comments". The "Link Details" tab is divided into two main panels. The left panel, titled "SRe Membership", includes an "Asset Description" field with the text "Edit35", an "SRe Membership" field with the text "ST00001", and an "SRe Description" field. The right panel, titled "Mobile Assets", features a "Filter for..." dropdown menu set to "All", followed by the word "or" and a text field containing "CMTS". Below these are two empty list boxes, with "Add >>" and "<< Remove" buttons positioned between them. At the bottom of the window, there are three buttons: "RFMS Additional Information", "Update", and "Close".

The fields have the following use:

[Site membership]

(Site number)

The number of the site which contains this fixed asset (if any)

(Site description)

The name of the site which contains this fixed asset (if any)

[Mobile assets]

Filter for [x] or

This check box and list box allows the user to use select the type of filter used to display the mobile assets in the list box below (Left hand side).

(Mobile assets available list box)

This list box shows which mobile assets are available to be included into this fixed asset if required.

Some considerable intelligence should be built into this facility based around the following ground rules:

- Fixed assets can have any associated mobile assets
- Only mobile assets which are not associated with other fixed / mobile assets are considered available (The exception is that they should be in the "stores" fixed asset)
- Only mobile assets which are not damaged or out of service in some way are considered available (The exception is when the mobile asset is being calibrated)

(Mobile assets associated list box)

These assets are added to this list by pressing the Add button having selected one or many (Standard windows Shift / control / mouse actions) assets first.

2.3.2.1.3.6 River Flow Monitoring Stations

When the main fixed asset registration form is used to enter RFMS (River Flow Monitoring Stations) *asset types*, then the additional details button can be used to enter specific details relating to that kind of fixed asset RFMS station. (See tableRFMSAdditionalInformation)

The following screens show the additional RFMS screens:

2.3.2.1.3.6.1 Additional Details - RFMS River Details

This screen allows the user to enter facts about the river which is being monitored:

Additional Information - RFMS

Asset Number: [] Name of Asset: []

River Details Relative Levels Data Availability Index Details Flaring ICM Details Station Details

River / Estuary Name: River Wye ☐ Fresh ☐ Tidal

Catchment Area: [] Km²

Hydro Ref: []

Distance from River Mouth: [] Km

Update Close

River / Estuary Name

This unrestricted text field of 50 characters is the name of river.

Fresh / Tidal Radio Buttons

This indicates whether the river is fresh or tidal.

Catchment Area

This unrestricted long integer field allows the area in square Km to be entered. This figure changes as you move down stream (The catchment increases) and thus can't be calculated within the software.

Hydro Reference number

This hydro reference number is entered as text and is calculated by the user according to which tributary is being measured

Distance from River Mouth

This unrestricted integer field allows the distance from the river mouth to be entered.

2.3.2.1.3.6.2 Additional Details - RFMS Relative levels

This screen allows the user to enter facts about the rivers relative levels to be entered:

Additional Information - RFMS

Asset Number: [] Name of Asset: []

River Details | **Relative Levels** | Data Availability | Intake Details | Range | RCH Details | Stream Details

Measurement Structure: **Complex Weir and sluices**

Centre Crest / Channel: [] metres ☐ AOD ☐ ALD Crest Tapping: ☐ Y ☐ N

Zero Staff Gauge: UpS [] m ☐ AOD ☐ ALD D/S [] m ☐ AOD ☐ ALD

Max Flood / Staff Level: [] metres ☐ AOD ☐ ALD

Bank Full Stage: [] metres ☐ AOD ☐ ALD

Ordinance Datum (O.D.M.): [] metres Grid Ref: [] Datum: []

Local Datum: [] metres (AOD) Grid Ref: [] Datum: []

Description of Local Datum: []

Channel Width: [] metres

Channel Length: [] metres enter value for wind growth

Update Close

Measurement structure

This is a database lookup of measurement structures available for fixed assets and is a drop down list box. (See lutMeasurementStructures)

Centre Crest / Channel height in meters AOB / ALD

These fields allow the fixed point value of the height of the centre of the channel to be entered, and also whether the point is Above the **Ordinance Datum** (AOD - National Standard Datum) or Above the **Local Datum** (ALD - some nearby measured reference point)

Crest Tapping Y or N

The user must enter here whether there is a crest tapping at this RFMS station.

Zero Staff gauge height Up Stream in meters AOB / ALD

These fields allow the fixed point value of the height of the upstream Staff gauge zero mark to be entered, and also whether the point is Above the **Ordinance Datum** (AOD - National Standard Datum) or Above the **Local Datum** (ALD - some nearby measured reference point)

Zero Staff gauge height Down Stream in meters AOB / ALD

These fields allow the fixed point value of the height of the downstream Staff gauge zero mark to be entered, and also whether the point is Above the **Ordinance Datum** (AOD - National Standard Datum) or Above the **Local Datum** (ALD - some nearby measured reference point)

Max flood / Staff level in meters AOB / ALD

These fields allow the fixed point value of the height of the maximum flood level or max staff gauge level to be entered , and also whether the point is Above the **Ordnance Datum** (AOD - National Standard Datum) or Above the **Local Datum** (ALD - some nearby measured reference point)

Bankfull Stage in meters AOB / ALD

These fields allow the fixed point value of the height of the Bankfull Stage level to be entered, and also whether the point is Above the **Ordnance Datum** (AOD - National Standard Datum) or Above the **Local Datum** (ALD - some nearby measured reference point)

Ordnance Datum in meters

These fields allow the fixed point value of the height of the ordnance datum (Ordnance Benchmark) in metres.

Grid Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide full information)

Once this field has been entered, the national grid reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency. This will allow for plotting from the Mapinfo system with relative ease.

Local Datum in meters

The height of the local datum as a fixed point number in metres is entered by the user into this field.

Grid Reference of local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Description of local datum

This is a Memo edit field which is not restricted and has a length of 500 characters maximum. The text may need to scroll the memo field to fit in all text when fully filled in.

Channel width in metres

The channel width as a fixed point number in metres is entered by the user into this field.

Channel length in metres

The channel length as a fixed point number in metres is entered by the user into this field.

2.3.2.1.3.6.3 Additional Details - RFMS Data Availability

This screen allows the user to enter facts about availability of data from the river flow monitoring station:

Additional Information - RFMS

Asset Number: [] Name of Asset: []

River Data | Adverse Levels | **Data Availability** | Rating Data | Range | RFMS Data | Station Data

Fixed Frequency [] minutes Number of rating equations entered []

Time Series Levels (Tidal) ☐ Yes ☐ No Level Class []

Time Series Levels (Fresh) ☐ Yes ☐ No

Time Series Flows (Fresh) ☐ Yes ☐ No Date Entered [12/5/1997]

Autographic Chart Levels ☐ Yes ☐ No Date Last Modified [14/5/1997]

Tide Gauge ☐ Yes ☐ No

Alarms ☐ Yes ☐ No

Daily Mean Flows ☐ Yes ☐ No

River Temperature ☐ Yes ☐ No

Temperature Chart ☐ Yes ☐ No

Time Series Temperature ☐ Yes ☐ No

Fish Counter ☐ Yes ☐ No

Fish Pass ☐ Yes ☐ No

[Update] [Close]

Fixed frequency minutes

This un-editable field of frequency value is looked up by looking at the data from the currently active logger data within this fixed asset (only one can be active at any one time)

Number of ratings equations entered

This un-editable field of the number of ratings equations is displayed from the data from the ratings equations from the RFMS ratings equation Tab (this is the number of entries in the table of ratings for this fixed asset)

Time series levels (Tidal) (Y/N)

If the fixed asset is tidal and there is a logger attached to this asset then this is set to YES else it is NO.

Time series levels (Fresh) (Y/N)

If the fixed asset is fresh water and there is a logger attached to this asset then this is set to YES else it is NO.

Time series flows (Fresh) (Y/N)

If the fixed asset is fresh and there is a logger attached to this asset then this is set to YES else it is NO.

Autographic chart (Level) (Y/N)

If the fixed asset has an autographic chart recorder attached to this asset then this is set to YES else it is NO.

Telemetry (Y/N)

This is entered by the user and is set to Y if there is telemetry available at the fixed asset.

Alarms (Y/N)

This is entered by the user and is set to Y if there is any alarm available at the fixed asset.

Daily Mean flows (Y/N)

If daily mean flows are available at this fixed asset then the user sets this to "Y"

River Temperature (Y/N)

If the river temperature is monitored then the user sets this to "Y"

Temperature Chart (Y/N)

If there is a chart recorder connected to the temperature sensor for the river then this is set to "Y" by the user.

Time series temperature (Y/N)

If time series temperature measurements are made at this fixed asset then the user sets this to "Y".

Fish counter (Y/N)

If there is a fish counter at this fixed asset then the user sets this to "Y", otherwise "N"

Fish Pass (Y/N)

If there is a fish pass at this fixed asset then the user sets this to "Y", otherwise "N"

Level Class

This is the classification of the station and is manually entered by the user.

Date entered

The date the information was first entered into this form is stored here by the computer (Read only field)

Date last modified

The date the information was last entered into this form is stored here by the computer (Read only field).

2.3.2.1.3.6.4 Additional Details - RFMS Intake Details

This screen allows the user to enter facts about the intake details of the river flow monitoring station:

Additional Information - RFMS						
Asset Number	Name of Asset					
Asset Details	Asset Level	Date Available	Intake Details	Asset Type	Intake Details	Asset Date
Upstream Stilling Well Diameter		metres	Number of Upstream Intakes			
Top of Stilling well		metres	<input type="radio"/> AOD <input type="radio"/> ALD	Diameter		metres
Highest Intake Invert		metres	<input type="radio"/> AOD <input type="radio"/> ALD	Diameter		metres

Intermediate (1)		metres	<input type="radio"/> AOD <input type="radio"/> ALD	Diameter		metres
Intermediate (2)		metres	<input type="radio"/> AOD <input type="radio"/> ALD	Diameter		metres
Lowest Intake Invert		metres	<input type="radio"/> AOD <input type="radio"/> ALD	Diameter		metres

Update Cancel

Upstream stilling well diameter

This un-regulated field is the diameter of the upstream intake well and is entered here by the user. The field is a floating point number.

Number of upstream intakes

The number of upstream intakes is entered here by the user. The field is an integer number.

Top of stilling well in metres (AOD/ALD)

The user should indicate the height of the top of the stilling well (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Highest intake invert in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the highest intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Intermediate 1 in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the intermediate 1 intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Intermediate 2 invert in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the intermediate 2 intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Lowest intake invert in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the lowest intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Downstream stilling well diameter

This un-regulated field is the diameter of the downstream stilling well and is entered here by the user. The field is a floating point number.

Number of Downstream intakes

The number of downstream intakes is entered here by the user. The field is an integer number.

Top of stilling well in metres (AOD/ALD)

The user should indicate the height of the top of the stilling well (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Highest intake invert in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the highest intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Intermediate 1 in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the intermediate 1 intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Intermediate 2 invert in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the intermediate 2 intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

Lowest intake invert in metres (AOD/ALD) and diameter

These un-regulated fields are entered by the user to indicate the height of the lowest intake (floating point) whether it is above Local or Ordnance datum and its diameter in metres (also floating point).

2.3.2.1.3.6.5 Additional Details - RFMS Rating equations

This screen allows the user to enter the rating equations for the river flow monitoring station:

Additional Information - RFMS

Asset Number: Name of Asset:

Flow Details: Relative Levels: Data Availability: Rating Details: Settings: RF Details: Station Details:

Rating Table:

Min Stage: metres Min Flow: Cumecs
 Max Stage: metres Max Flow: Cumecs

Constant (c): Adjustment (a): Slope (b): Hmax (h): Date Flange:

Newton: 33.85 0.15 1.53 7 12/3/1950 12/5/1997

Older:

From: 1952 to 1997 Q.95 Cumecs Classification: Date Entered: 12/3/1997
 Average Daily Flow: Cumecs Classification: Last Modified: 14/5/1997
 Mean Annual Flood: Cumecs Classification:

Reliability Classification: Overall Station Class: LF2MF2HF2R1 Last changed on: 14/5/1997

Rating Table

This free text field of 5 characters allows the user to type in a rating table type.

Minimum stage in Metres

This floating point number is the depth of the minimum stage in metres.

Maximum stage in Metres

This floating point number is the depth of the maximum stage in metres.

Minimum flow in Cumecs

This floating point number is the depth of the minimum flow in cumecs to 3 decimal places.

Maximum flow in Cumecs

This floating point number is the depth of the maximum flow in cumecs to 3 decimal places.

Ratings tables details:

The table of ratings would be editable within the form: --

Constant(c)	Adjustment(a)	Slope(b)	Hmax(h)	Validity start date	Validity end date

This is an actual database table for all ratings, (see tableRatings).

From (year)

The validity (start date as a year) of the current classification figures such as Q95 is entered here.

to (year)

The validity (end date as a year) of the current classification figures such as Q95 is entered here.

Long term Q95

The long term Q95 flow value (fixed point to 3 decimal places) is entered here along with the value in cumecs also to 3 decimal places.

Long term average daily flows (adf)

The long term average daily flow (fixed point to 3 decimal places) is entered here along with the value in cumecs also to 3 decimal places.

Long term mean annual flood (maf)

The long term mean annual flood value (fixed point to 3 decimal places) is entered here along with the value in cumecs also to 3 decimal places.

Overall station class

The Overall station classification can be entered here into this combo edit list box. Each new classification which is entered is added to a table of classifications to allow previous classifications to be viewed. The latest classification is the displayed class in the edit field.

Last date changed on

The last edit date of the currently shown overall station classification is displayed here. It is read only.

Date entered

This is the date the record was first entered.

Date Last modified

This is the date the record was last updated.

This screen allows the user to enter facts about the IOH (Institute of hydrology) details of the river flow monitoring station:

Additional Information - RFMS

Asset Number: [] Name of Asset: []

River Details | Relative Levels | Data Availability | Irrigation Details | Runoff | **IOH Details** | Station Details

Measuring Authority: []

Level: [] Sensitivity: []

Station Type: CE []

Description: Composite Broad crested weir. The weirpounding weir includes a unique w type with a rectangular and flat top and with or without dividers 7777 III

Factors affecting runoff: N []

Description: Natural features are no abstraction and discharges at the stations due to them is so limited that it is considered to be within 10% of the natural

[Update] [Close]

Measuring Authority

This is a lookup table of Measurement Authorities. (See lutRFMSMeasurementAuthorities)

Level

This is a free text field of 5 characters length.

Sensitivity

This field is a fixed precision value for the sensitivity with 3 decimal places.

Station Type

The station type is the short (initials) description of RFMS asset types. It is a look up from table lutRFMSStationTypes

Description

The description gives the full description as entered in lutRFMSStationTypes.

Factors affecting runoff

The factors affecting runoff are the short (initials) description of RFMS runoff types. It is a look up from table lutRFMSRunOffFactors.

Description

The description gives the full description as entered in lutRFMSRunOffFactors..

2.3.2.1.3.6.7 Additional Details - RFMS Rating Station description

This screen allows the user to enter a full description detailing the river flow monitoring station (additional comments may be added here also, although the history should store details of changes):

The screenshot shows a software window titled "Additional Information - RFMS". At the top, there are two input fields: "Asset Number" and "Name of Asset". Below these are several tabs: "River Data", "Rating Level", "Data Availability", "Initial Data", "Rating", "ION Data", and "STATION Details". The "STATION Details" tab is currently selected. The main content area is a large text box labeled "Comment" which contains the text "Information about this station". At the bottom right of the window are two buttons: "Update" and "Close".

Comments

A large (512 characters) memo entry field to allow free text description, comments etc.

2.3.2.1.3.7 Rain gauging Stations

When the main fixed asset registration form is used to enter RGAS (Rain gauging Stations) *asset types*, then the additional details button can be used to enter specific details relating to that kind of fixed asset RGAS station.

The following screens show the additional RGAS screens:

2.3.2.1.3.7.1 Additional Details - RGAS details

This form covers the general details of the RGAS station:

Additional RGAS Details

Asset Number Name of Asset

RGAS Details Details Station Details RGAS Details

Met Office Reference Number

Altitude Metres AOD

Date Entered 1/1

Date Last modified 1/1

Update Close

Met Office reference number

This is an integer field for the MET Office reference number which relates to this RGAS site and is entered here by the user. (Up to 6 characters long)

Altitude (metres AOD)

This is a fixed point (3 decimal places) value and is related to the altitude above the local datum.

Date Entered

This read only field is the date that the RGAS details were first entered

Date last modified

This read only field is the date that the RGAS details were last changed.

2.3.2.1.3.7.2 Additional Details - RGAS observer details

This form covers the observer details of the RGAS station:

Additional RGAS Details

Asset Number: [] Name of Asset: []

RGAS Data Observer Station Details Recording Details

Contact: [Fk Welsh Region - Name Insurance]

Address: [Adams House
St Mellons Busstop
St Mellons]

Town / City: [CARDIFF] County: [South Glamorgan]

Postcode: [CF11 1LP]

Tel: [] Fax: []

[Details / Change Address]

☐ Not Paid ☐ Paid How Much: []

Observer: [Who does the measuring]

[Update] [Close]

Observer, Address, Town / City, County, Postcode, Tel, Fax

These fields are read only fields from the currently selected address for the observer. The information comes from the main addresses table using "observer" as a filter for the address type.

Details / Change Address

This button allows a new address to be added or changed, and more information is available. (See above for add / modify address form). (Note the history will be maintained within this system as described in the introduction to allow access to the previous names)

Paid / Not paid

This radio button is used to show whether the observer is paid or not.

How much

If the radio button above is set to paid then this field is enabled to allow a cost entry field.

Observer

Further details about the observer may be entered here in the free text field (50 characters)

2.3.2.1.3.7.3 Additional Details - RGAS station details

This form covers the station details of the RGAS station:

Raingauge type

This is a free text field and allows for up to 50 characters of text to describe the raingauge site type.

Measure type

This is a free text field and allows for up to 50 characters of text to describe the measure type used at this site.

Raingauge make (Tipping bucket)

This is a free text field and allows for up to 50 characters of text to describe the make of the tipping bucket type of raingauges used on this site.

Purpose

This field is a look up table of monitoring purposes for the rain gauge. (See table lutRGASPurposes).

Check gauge (Y/N)

These radio buttons are to indicate whether the raingauge fitted is being used as a check gauge or not.

Date opened

This free date field is used to indicate when the rain gauge was last started to be used before a series of measurements.

Date closed

This free date field is used to indicate when the last series of measurements ended using this raingauge.

Date last refurbished

This free date field is used to indicate when this raingauge was last refurbished

Date of last Met office inspection

This free date field is used to indicate when the last MET Office inspection of this raingauge site occurred.

2.3.2.1.3.7.4 Additional Details - RGAS recording details

This form shows any linked information about recording with data loggers:

Asset Number: [] Name of Asset: []

Asset Data Library Alarm Data Recording Details

Logger: ☒ Y ☐ N

Telemetry: ☒ Y ☐ N

Fixed Frequency Time Series: ☒ Y ☐ N Dub Daily: ☒ Y ☐ N minutes

Bucket Size: [] mm / Hr

Manual Reading Interval:

Media Type for Data:

Data frequency:

Update Close

Logger

If there is a logger linked to this asset (defined within the site definition tree - See above) which is currently active then this radio button will show "Y" else it will show "N".

Telemetry

If there is a logger with telemetry linked to this asset (defined within the site definition tree - See above) which is currently active then this radio button will show "Y" else it will show "N".

Fixed frequency time series (option)

If there is a logger linked to this asset which is currently active using fixed frequency time series measurements , then this radio button will be shown as selected.

Sub Daily (option)

If there is a logger linked to this asset which is currently active using sub daily measurements, then this radio button will be shown as selected.

Sub Daily (option)

If there is a logger linked to this asset which is currently active using sub daily measurements, then this field will show the interval - This may be a look up table - (See lutSubDailyIntervals)

Bucket size

The bucket size to be used at this site is set here it is an integer value in mm/tip.

Manual reading interval

This is the interval between readings used at this fixed asset. It is obtained from a lookup table. (See lutFrequencies/Days)

Media type for data

This is the type of data media used at this fixed asset. It is obtained from a lookup table. (See lutMediaTypes)

Data frequency

This is the frequency of data stored for this fixed asset. It is obtained from a lookup table. (See lutFrequencies/Days)

2.3.2.1.3.8 Bore Holes

When the main fixed asset registration form is used to enter Bore Hole *asset types*, then the additional details button can be used to enter specific details relating to that kind of fixed asset bore hole.

The following screens show the additional Bore Hole screens:

2.3.2.1.3.8.1 Additional Details - BGS Ref Numbers

This screen allows the reference numbers for British Geological Society to be entered for the bore hole in question:

The screenshot shows a software window titled "Bore Hole Additional Information". It features a header section with "Asset Number" and "Name of Asset" input fields. Below this is a tabbed interface with six tabs: "BGS Ref Numbers", "Acquire Details", "Fiducial Levels", "Borehole / Well details", "Offshore records", and "Data Availability". The "BGS Ref Numbers" tab is active, displaying two input fields: "BGS (Keyword) Reference Number [ST66SE/0000]" and "BGS (Wallingford) Reference Number [ST66/0000]". At the bottom right of the window are "Update" and "Close" buttons.

BGS (Keyworth) reference number

The reference used by the Keyworth British Geological society for this Borehole is entered here. (Up to 11 digits)

The reference will be in the following format

ST66SE/0000

BGS (Wallingford) reference number

The reference used by the Wallingford British Geological society for this Borehole is entered here. (Up to 9 digits)

The reference will be in the following format

ST66/0000

2.3.2.1.3.8.2 Additional Details - Borehole Aquifer details

New Note Additional Information					
Agent Number	Name of Agent				
PUS File Number	Acquire Details	Signature Notes	Search / Will search	State/Province	City/County
Acquire Reference	<div>0001</div> <div>24</div>				
Acquire type	SOFAC (SUSPENSE) - Law enforcement - Kin - others				
Acquire Full Description	Characterization (includes main where there information CA is provided the details				
Location					
<div>Update</div> <div>Clear</div>					

This is the reference number for the aquifer type and comes from a lookup table. (See lutAquiferDetails.)

This is the description of the geology for the aquifer - The Environment Agency to provide this information. (The information will come from lutAquiferDetails and is automatically linked to the full description)

This is the full description of this kind of aquifer - The Environment Agency to provide this information. (The information will come from lutAquiferDetails and is automatically linked to the aquifer type)

This free text field allows for description of the location up to 128 characters in length.

The altitude details of the borehole attributes are entered here:

Depth below local datum (AOD / ALD)

The depth below the local datum point in metres is a fixed point value of 3 decimal places resolution. The user must also select whether the datum is the Local datum or the ordnance datum.

Ordinance Datum in meters

These fields allow the fixed point value of the height of the ordnance datum (Ordnance Benchmark) in metres.

Grid Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the ordnance datum will be automatically calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency

Dipping / Local Datum in meters

The height of the local datum as a fixed point number in metres is entered by the user into this field.

Grid Reference of dipping / local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of dipping / local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Description of dipping local datum

This is a Memo edit field which is not restricted and has a length of 500 characters maximum. The text may need to scroll the memo field to fit in all text when fully filled in.

2.3.2.1.3.8.4 Additional Details - Borehole / Well details

Further information about the borehole itself is entered on this form:

The screenshot shows a software window titled "Borehole Additional Information". It features a tabbed interface with the following tabs: "Borehole Details", "Borehole Water Levels", "Borehole Water Quality", "Borehole Water Use", and "Borehole Water Discharge". The "Borehole Details" tab is currently selected. This tab contains several input fields and checkboxes. On the left, there are three text boxes for "Well Diameter", "Depth of Borehole", and "Casing Depth", each followed by a unit label "metres". Below these are two radio button groups: "Pumped" and "Pump Test", each with "Y" and "N" options. There is a date entry field for "Date of Pump Test" showing "11/11". Below that is a text box for "Number of pump tests". Further down are two more radio button groups: "Borehole Log" and "Geophysical Log", each with "Y" and "N" options. At the bottom of this section are two date entry fields for "Start of Monitoring" and "End of Monitoring", both showing "11/11". A checkbox labeled "Ongoing" is also present. On the right side of the tab, there is a large text area titled "Details relating to pump tests" which contains the text: "Several pump tests have been requested for this borehole due to the irregular volumes of water obtained." At the bottom right of the window are two buttons: "Update" and "Close".

Well diameter (Metres)

The diameter of the well in metres is entered here by the user as a fixed point value to 3 decimal places.

Depth of borehole

The depth of the borehole is entered here by the user as a fixed point value to 3 decimal places.

Casing Depth

The depth of the man made casing of the borehole is entered here by the user as a fixed point value to 3 decimal places.

Pumped (Y/N)

If the borehole is pumped then this radio button should be set "Y" by the user else it should be set to "N"

Pump test (Y/N)

If the borehole has had a pump test then this radio button should be set "Y" by the user else it should be set to "N"

Date of pump test

Each time a pump test is done on this borehole then the date of that test should be entered here as a date entry. (It is a combo list box allowing previous dates to be seen from the history).

Number of pump tests

This field will be automatically updated from the number of dates entered in the above combo list box.

Borehole log

If there is a borehole log maintained then the user must enter "Y" here, otherwise enter "N".

Geophysical log

If there is a geophysical log maintained then the user must enter "Y" here, otherwise enter "N".

Start of Monitoring

The date that monitoring was started on this borehole is entered here manually as a date entry.

End of Monitoring

The date that monitoring ended on this borehole is entered here manually as a date entry.

Ongoing (Y/N)

If the monitoring is still ongoing then this radio button is set to "Y" else it is set to "N".

Details relating to pump tests.

The user may enter a multi line (memo) field here to describe why the pump tests are being carried out.

2.3.2.1.3.8.5 Additional Details - Database records

The database record of the hydrolog software is stored in this form:

Hydrolog ID

This ID number is typed in here as a free text entry of 12 characters.

Start of record on Hydrolog

This date field is entered to indicate when the record was started on the hydrolog software.

End of record on Hydrolog

This date field is entered to indicate when the record was ended on the hydrolog software.

Initial water quality sample

This date field is entered to indicate when the initial water quality sample was taken.

Water quality sample point reference number

This reference number is used to indicate the water quality sample and is a free text field of 12 characters in length.

Water quality Software ID

This field is the water quality software ID number and is a free text 10 character field.

Quality parameters

This field allows the user to identify parameters sampled at this site. It will be more than 1 of a set of pre-defined parameters, entered as free text - Up to 500 characters are to be used to store this data.

2.3.2.1.3.8.6 Additional Details - Data Availability

The following form links the Borehole with the availability of data from data loggers:

The screenshot shows a web-based form titled "Bore Hole Additional Information". It features several tabs at the top: "Asset Number", "Name of Asset", "BGS Ref Number", "Asset Details", "Related Logs", "Borehole/Well Details", "Borehole Logs", and "Borehole Summary". The "Borehole/Well Details" tab is currently selected. The form contains the following fields and controls:

- "Frequency of Manual Dip": A dropdown menu set to "Daily".
- "Logger": A radio button group with "Y" and "N" options.
- "Telemetry": A radio button group with "Y" and "N" options.
- "Dip": A radio button group with "Y" and "N" options.
- "Dip Frequency": A text input field containing the value "4".
- "readings per": A dropdown menu set to "day".

At the bottom right of the form, there are two buttons: "Update" and "Clear".

Frequency of Manual dip

This is the interval between readings used at this fixed asset. It is obtained from a lookup table. (See lutFrequencies/Days)

Logger (Y/N)

If there is an active logger attached to this bore hole, then this read only radio button will be set to "Y" otherwise it will be set to "N".

Telemetry (Y/N)

If there is an active logger with telemetry attached to this bore hole, then this read only radio button will be set to "Y" otherwise it will be set to "N".

Autographic (Y/N)

If there is an autographic chart recorder attached to this asset (as defined by the site asset definition tree) then this read only radio button is set to "Y" otherwise it is set to "N".

DIP frequency

The number of readings per day is set in this field for the datalogger attached to this bore hole and is derived from the lookup table lutLoggerEventFrequency.

Dip frequency period reference (list box)

This list box allows the user to select the period to which the DIP frequency is related. For examples 4 readings per *day*, 5 readings per *week*. It is derived from a look up table (see lutDipFrequencyDurations).

2.3.2.1.3.9 SPOT Gauging sites

When the main fixed asset registration form is used to enter SPOT gauging sites *asset types*, then the additional details button can be used to view the linking details to other asset types.

The following screens show the additional SPOT gauge screens:

2.3.2.1.3.9.1 Additional Details - SPOT Gauging sites

SPOT Gauge Additional Details

Asset Number: [] Name of Asset: []

NOTE: Use a "Site" to link this fixed asset to the spot gauging station

Linked to asset type: ☐ RFMS ☐ SPOT

Linked Asset Number: []

Link Name: []

River Name: []

Hydro Ref.: []

[Update] [Close]

Linked to asset type RFMS / SPOT

If the site definition contains an RFMS and SPOT gauge site then the linked to asset type read only radio button is set to "RFMS" otherwise it is set to "SPOT".

Linked asset number

If the site definition contains the RFMS and SPOT sites then the number of the RFMS site associated with this SPOT site is shown here (read only).

Link Name

The name of the linked asset (above) is displayed here. (read only)

River name

The name of the river of the linked asset (above) is displayed here. (read only)

Hydro Reference

The name of the hydro reference of the linked asset (above) is displayed here.(read only)

2.3.2.1.3.10 STORE fixed assets

When the main fixed asset registration form is used to enter STORE *asset types*, then the additional details button has no information, however, the message could be displayed to indicate some help message.

2.3.2.1.3.10.1 Additional Details - SPOT Gauging sites

The following screens show the additional store message:

Store	NRA Welsh Region - Water Resources		
Address	Abacus House St Mellons Business Park St Mellons		
Town / City	CARDIFF	County	South Glamorgan
Postcode	CF3 0LT		
Tel		Fax	
Address Type	Store		
Content			
<div>Search Update Close</div>			

Store

This is the name of the store - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

Address

This is the address of the store - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

Town/City

This is the town or city the store is in - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

Postcode

This is the postcode of the store - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

Tel

This is the telephone number of the store - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

Fax

This is the fax number of the store - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

Address Type

This is the address type of the store - It it can only ever be Store.

Contact

This is the name of the contact - It comes from the address table (see tableAddresses) and cannot be modified - to enter a new address the user must click on Search and enter into the main address entry form.

2.3.2.1.3.11 Reservoir fixed assets

When the main fixed asset registration form is used to enter RES (Reservoirs) *asset types*, then the additional details button can be used enter additional reservoir details.

The following screens show the additional RES screens:

2.3.2.1.3.11.1 Additional Details - Reservoirs General Information

Reservoir Additional Details

Asset Number: [] Name of Asset: []

General | Storage Details

River Name: []

Catchment Area upstream of DAM: [] Km²

Hydro Ref.: []

Distance from River Mouth: [] Km

Ownership: []

Section 28 agreement ☐ Y ☐ N

Review Close

River Name

The river name of the river on which the reservoir is placed is described here by the user and is a 40 character free text field.

Catchment Area Upstream of DAM

The area of the catchment area upstream of the DAM is entered here by the user in Km² it is a floating point number of up to 8 digits.

Hydro Reference

The hydro reference number is entered manually by the user as a 32 digit number.

Distance from River mouth

The distance from the river mouth in Km is entered here as a fixed point number of 3 decimal places accuracy.

Ownership

This free text field is used to indicate the ownership of the reservoir

Section 20 agreement (Y/N)

If there is a section 20 agreement associated with this reservoir then this option button should be set to "Y" otherwise it should be set to "N".

2.3.2.1.3.11.2 Additional Details - Reservoirs Relative Levels

The following form shows the reservoir relative levels details

Reservoir Additional Details

Asset Number: [] Name of Asset: []

General | **Relative Levels** | Storage Details | Discharge Details

Construction Type: Earthfill with concrete core

Centre Crest / Spillway: [] metres ☐ AOD ☐ ALD

Zero Staff Gauge: [] metres ☐ AOD ☐ ALD

Dead water Level: [] metres ☐ AOD ☐ ALD

Lowest Pumping Level: [] metres ☐ AOD ☐ ALD

Max Flood / Staff Level: [] metres (Staff Gauge)

Ordinance Datum (O.D.M.): [] metres Grid Ref: [] Cartesian: []

Local Datum: [] metres (AOD) Grid Ref: [] Cartesian: []

Description of Local Datum: []

DAM Crest Width: [] metres

[Update] [Close]

Construction Type

This field is derived from the lookup table for construction types (maintained in the lookup tables section of the software - see below) and is a drop down list box of available types.

Centre Crest / Spillway (Metres AOD/ALD)

This field is the elevation of the centre crest or spillway of the reservoir and is entered here by the user. The field is a floating point number and is followed by a radio button to indicate whether the value is above either the ordnance or local datum point.

Zero Staff Gauge (Metres AOD/ALD)

This field is the elevation of the Staff gauges zero point and is entered here by the user. The field is a floating point number and is followed by a radio button to indicate whether the value is above either the ordnance or local datum point.

Dead water level (Metres AOD/ALD)

This field is the elevation of the dead water level and is entered here by the user. The field is a floating point number and is followed by a radio button to indicate whether the value is above either the ordnance or local datum point.

Lowest Pumping Level (Metres AOD/ALD)

This field is the elevation of the lowest pumping level and is entered here by the user. The field is a floating point number and is followed by a radio button to indicate whether the value is above either the ordnance or local datum point.

Max flood / Staff Level (Metres AOD/ALD)

This field is the elevation of the Maximum flood or maximum staff gauges level and is entered here by the user. The field is a floating point number and is followed by a radio button to indicate whether the value is above either the ordnance or local datum point.

Ordnance Datum in meters

These fields allow the fixed point value of the height of the ordnance datum (Ordnance Benchmark) in metres.

Grid Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency

Local Datum in meters

The height of the local datum as a fixed point number in metres is entered by the user into this field.

Grid Reference of local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Description of local datum

This is a Memo edit field which is not restricted and has a length of 500 characters maximum. The text may need to scroll the memo field to fit in all text when fully filled in.

DAM Crest width

This field is the width of the DAM in meters and is entered as a fixed point value (to 3 decimal places)

2.3.2.1.3.11.3 Additional Details - Reservoirs - Storage details

General	Reservoir Layout	Storage Details	Use Availability
Asset Number: [] Name of Asset: []			
Gross Water Storage	[]	Megalitres	
Dead Water Storage	[]	Megalitres	
Spillway Storage	[]	Megalitres	
Net Storage	[]	Megalitres	
Catchment Area At Upstream	[]	km ²	
Surface Area at Spillway	[]	km ²	
Surface Area at Dead Water	[]	km ²	
Yield	[]	Megalitres per Day	
Compensation discharge release	[]	cume	period [1/4] to [1/3]
	[]	cume	period [3/8] to [2/2]
[Update] [Close]			

Gross Water Storage (Megalitres)

The Gross storage capacity of the reservoir is entered here by the user and is in Megalitres. The field is a long integer.

Dead Water storage (Megalitres)

The dead water storage capacity of the reservoir is entered here by the user and is in Megalitres. The field is a long integer.

Spillway Storage (Megalitres)

The storage capacity of the reservoirs spillway is entered here by the user and is in Megalitres. The field is a long integer.

Net Storage (Megalitres)

The net storage capacity of the reservoir is entered here by the user and is in Megalitres. The field is a long integer.

Catchment area at spillway (Km²)

The catchment area of the reservoir is entered here by the user and is in Km². The field is a long integer.

Surface area at spillway (Km²)

The surface area of the reservoir is entered here by the user and is in Km². The field is a long integer.

Surface area at dead water (Km²)

The surface area at dead water of the reservoir is entered here by the user and is in Km². The field is a long integer.

Yield

In this field the user should enter the yield of the reservoir in megalitres per day.

Compensation discharge release 1st entry

This field allows for the entry of a figure for the compensation discharge release and its period of validity. The period of validity is an annual figure and thus does not have a year associated with it.

Compensation discharge release 2nd entry

This field allows for the entry of a second figure for the compensation discharge release and its period of validity. The period of validity is an annual figure and thus does not have a year associated with it.

2.3.2.1.3.11.4 Additional Details - Reservoirs - Data availability

Reservoir Additional Details

About Reservoir | Name of Reservoir | **Storage Details** | **Data Availability**

Record Reservoir Levels: ☒ Y ☐ N

Type of Record:

Start of Record: End of Record:

Data Entered: Data Last Modified:

Update Cancel

Record reservoir levels

If reservoir levels are to be recorded then the user clicks on the "Y" radio button otherwise he clicks on "N".

Type of record

This is a look up value for the types of record for this reservoir. (See lutReservoirRecordTypes)

Start of record

This date field is manually entered by the operator and is when the record started.

End of record

This date field is manually entered by the operator and is when the record ended.

Date entered

This date is automatically generated by the PC when the additional information for the data availability is first entered. (Read only)

Date updated

This date is automatically generated by the PC when the additional information for the data availability was last entered. (Read only)

2.3.2.1.3.12 STAFF fixed assets

When the main fixed asset registration form is used to enter STAFF (Staff gauge sites) *asset types*, then the additional details button can be used enter additional Staff site details.

The following screens show the additional STAFF screens:

2.3.2.1.3.12.1 Additional Details - STAFF - details

Staff Gauge Additional Details

Asset Number: [] Name of Asset: []

Details Type and Attachments Relative Level

Site ☐ Temporary ☐ Permanent

River Name: River Wye

Catchment Area: [] Km²

Hydro flat: []

Distance from River Mouth: [] Km

Reason: []

Update Close

Site - Temporary / Permanent

The user must click on either "temporary" or "permanent" to indicate which type of fixed asset Staff Gauge site is being defined.

River name

The name of the river being monitored is entered here it is a free text field of 40 characters length.

Catchment Area

The area of the catchment area is entered here by the user in Km^2 It is a floating point number of up to 8 digits.

Hydro Reference

The hydro reference number is entered manually by the user as a 32 digit number.

Distance from River mouth

The distance from the river mouth in Km is entered here as a fixed point number of 3 decimal places accuracy.

Reason

This field allows the user to enter a text reason for the staff asset being at that site. It is a memo field of up to 250 characters.

2.3.2.1.3.12.2 Additional Details - STAFF type and attachment

Staff Gauge Additional Details

Asset Number: [] Name of Asset: []

Staff Gauge / Board Range: [1] metres

Feature (Backing Board): Timber support - Free standing

Verticality / Slope: [38] °

Update Discard

Staff gauge / Board range

The range (in metres) of the Staff Gauge used in this fixed asset is entered by the user in this field as a fixed point value (to 3 decimal places).

Backing Board

The kind of backing board for the Staff Gauge is entered here and is derived from a look up table (See lutBackingBoardTypes) and is entered by selecting an entry in the drop down list box.

Verticality / Slope

The verticality or slope value is entered here by the user as in integer value.

2.3.2.1.3.12.3 Additional Details - STAFF relative levels

Staff Gauge Additional Details

Asset Number: [] Name of Asset: []

Date: [] Type and Attachment: [] Relative levels: []

Zero Staff Gauge: [] metres ☐ AOD ☐ ALD

Max. Flood / Staff Level: [] metres

Ordnance Datum (D.B.M.): [] metres Grid Ref: [] Cartesian: []

Local Datum: [] metres (AOD) Grid Ref: [] Cartesian: []

Description of Local Datum: []

Date Entered: []

Date last modified: []

[Update] [Close]

Zero Staff gauge (metres AOD / ALD)

This fixed point field (to 3 decimal places) is entered by the user to indicate the elevation of the zero point on the staff gauge and whether it is above Local or Ordnance datum.

Maximum flood / staff level (metres)

This fixed point field (to 3 decimal places) is entered by the user to indicate the maximum flood or Staff level on the staff gauge to be fixed at this fixed asset.

Ordnance Datum in meters

These fields allow the fixed point value of the height of the ordnance datum (Ordnance Benchmark) in metres.

Grid Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of Ordnance datum

This text field allows the grid reference of the ordnance datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the ordnance datum will be calculated and updated according to known rules supplied by the Environment Agency.

Local Datum in meters

The height of the local datum as a fixed point number in metres is entered by the user into this field.

Grid Reference of local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

SO-XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the cartesian reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Cartesian Reference of local datum

This text field allows the grid reference of the local datum to be entered according to certain rules:

XXXX-YYYY (Environment Agency to provide information)

Once this field has been entered, the national grid reference of the local datum will be calculated and updated according to known rules supplied by the Environment Agency

Description of local datum

This is a Memo edit field which is not restricted and has a length of 500 characters maximum. The text may need to scroll the memo field to fit in all text when fully filled in.

Date entered

The date is generated by the PC when the relative levels information is first entered and displayed here as a read only date field.

Date last modified

The date is generated by the PC when the relative levels information is changed and displayed here as a read only date field.

2.3.2.1.4 Register Mobile Assets

Returning to the Site asset definition, as described earlier, the user can associate mobile assets with a fixed asset by selecting the fixed asset within the site, and clicking on the "Add mobile asset" or "New mobile asset" buttons.

When the user has elected to enter a new mobile asset (or edit an existing one) the following form will be presented:

The screenshot shows a web form titled "Mobile Asset Registration". It has three tabs: "Mobile Asset Details", "Cost Details", and "Asset Usage", with "Mobile Asset Details" being the active tab. The form contains several input fields and buttons. The "Region" field is set to "Welsh" and the "Area" field is set to "South Eastern". The "Asset Type" is "CMTS" and the "Current Meters" section is expanded. The "Asset Number" is "110009" and there is a "Search" button next to it. A note says "If on Loan Enter the Personal Asset Number" followed by an empty field. The "Model Reference" is "BFM001" and the "Description" is "Braystoke Miniature Current Flow Meter". The "Manufacturer" is "00013" and the "Valeport Limited." field is also populated. There are fields for "Serial Number" and "Status". A "Validated" checkbox is set to "Y". At the bottom, there are buttons for "CMTS Additional Information", "Update Record", and "Close".

Mobile Asset Registration			
Mobile Asset Details	Cost Details	Asset Usage	
Region	Welsh	Area	South Eastern
Asset Type	CMTS	Current Meters	
Asset Number	110009	Search	If on Loan Enter the Personal Asset Number
Model Reference	BFM001	Description	Braystoke Miniature Current Flow Meter
Manufacturer	00013	Valeport Limited.	
Serial Number		Status	
Date Entered	/ /	Date last modified	/ /
CMTS Additional Information		Update Record	Close

Region

This is a drop-down list box with a database lookup (lutAgencyRegions). (It should default to region set up during installation)

Area

This is a drop down list box with a database lookup (lutAgencyAreas). (It should default to area set up during installation)

Asset type

This is a drop down list box with a database lookup (lutAssetTypes) (Automatically updated when the Asset type description is changed.)

Asset type Description

Next to mobile asset types are the mobile asset type descriptions also a database lookup (lutAssetTypes). This is a read only field. (Automatically updated when the Asset type is changed.)

Asset Number

The asset number is calculated from a unique number (the next fixed asset record number) according to the following rules:

The asset seed is obtained from the areas look up tables using the mobile asset seed (lutAgencyAreas)

If on loan the parent asset number

This number is a unrestricted text field of 12 characters and may be entered if the mobile asset is on loan from another region or area to allow traceability of borrowed equipment.

Model reference

The model reference number of the mobile asset is derived from a lookup table of manufacturers and model details. (See lutModelDetails). The Model description is changed on selection of a new model reference.

Model Description

This model description field may be used to select the model also and is derived from a lookup table of manufacturers and model details. (See lutModelDetails). The Model reference is changed on selection of a new description.

Manufacturer ID

This is the ID from the main address table (all addresses are held in the one table). The filter used to list all those addresses for the mobile assets is address type = "Manufacturer". See tableAddresses.

Manufacturer Name

This is the name of manufacturer from the main address table (all addresses are held in the one table). The filter used to list all those addresses for the mobile assets is address type = "Manufacturer". See tableAddresses.

Status

This is the status of the mobile asset (Such as active, inactive etc) This is a database look up table (lutStatus).

Record Validated

Simply a boolean (Yes/No) to indicate that the record has been checked by someone.

Date Entered

A computer generated date for when the fixed asset record was generated / entered first.

Date Last Modified

A computer generated date to indicate when the record was last changed. (used for the change history also)

2.3.2.1.4.1 Mobile Assets - Cost Details Tab.

If the user wishes to enter more information, specifically about the cost of the fixed asset, then the user must click on the Cost details Tab producing the following form page:

The screenshot shows a web form titled "Mobile Asset Registration" with three tabs: "Mobile Asset Details", "Cost Details" (which is selected), and "Asset Images". The "Cost Details" tab contains the following fields:

- Regional Inventory Asset Number: A large text input field.
- Date Purchased: A date input field.
- Initial Cost: A cost input field.
- Asset Life: A dropdown menu.
- Regulation Number: A text input field.
- Order Number: A text input field.

At the bottom of the form are three buttons: "CMS Additional Information", "Update Record", and "Close".

Regional Inventory Asset Number

The regional inventory asset number is entered here as a text field of 20 characters.

Date Purchased

The date the mobile asset was purchased is entered here by the user. It is a date field.

Initial Cost

The purchase cost of the asset is entered here, it is a cost field.

Asset Life

The asset life is a look up (read only) field attained from the asset type look up tables. (See lutAssetTypes)

Requisition Number

The purchase requisition number is entered here as a free text field of 10 characters in length.

Order Number

The purchase order number is entered here as a free text field of 15 characters in length.

2.3.2.1.4.2 Mobile Assets - Mobile Asset Linkages Tab

Within each mobile asset, there can be links to other assets, such as Loggers which “contain sensors”. the user must click on the linkages tab to define these links:

The screenshot shows a software window titled "Mobile Asset Registration" with three tabs: "Mobile Asset Details", "Cost Data", and "Asset Linkages". The "Asset Linkages" tab is active. It is divided into two main sections. The left section, titled "Fixed Asset Parent", contains fields for "Asset Type" (set to "RFMS"), "Memo1", "Asset Number" (set to "Edft3"), "Asset Description", and "Memo2". The right section, titled "Mobile Assets", has a "Filter for..." dropdown set to "All" or "CMTS", and two empty list boxes. Between the list boxes are "Add >>" and "<< Remove" buttons. At the bottom of the window are three buttons: "CMTS Additional Information", "Update Record", and "Cancel".

Fixed Asset Parent - Asset Type, Asset Number and Asset Description

In this group, the above information is shown relating to the parent fixed asset to remind the user which assets are being dealt with.

Mobile Assets:

Mobile Assets - Filter for All / List

Checking on the Filter for all checkbox will cause all available (un attached) mobile assets to be listed on the left hand list box below. Clicking on one of the asset types list will deselect the check box and only allow assets of that type to be shown in the left hand list box below

Add Button

If the user wants to add mobile assets to this mobile asset (for example a sensor to a logger) then he / she must select the asset required on the left and then click on the add button. The mobile asset (in this example a sensor) would then appear on the right hand side and disappear from the left.

Remove Button

If the user wants to remove mobile assets from this mobile asset (for example a sensor from a logger) then he / she must select the asset to be removed on the right and then click on the remove button. The mobile asset (in this example a sensor) would then appear on the left hand side and disappear from the right.

2.3.2.1.4.3 Mobile Assets additional details - Autographic recorders Installation Details

Returning to the mobile asset main entry form. For most of the mobile asset types, there are additional forms available depending on the asset types (rather similar to the fixed asset approach). To select these additional forms, the user must click on the "XXXX Additional Information" button at the bottom of the main mobile asset form, where XXXX is the asset type such as RAIN, AUTO etc.)

If the mobile asset being detailed is an autographic chart recorder, then by clicking on the Additional information button further details may be entered about the mobile asset. The following form will be displayed:

Additional Autographic Information

Asset Number: 110005 Asset Type: Autographic Recorder

Installation Chart Data

Installed: / / by: Engineers Name

Removed: / / by: Engineers Name

Digitised: ☒ Y ☐ N

Update Close

Installed

This is the date that the autographic chart recorder was installed. It is a date field.

Installed By

This is the name of the commissioning engineer and is obtained from the look up table for Staff - (See lutStaffDetails)

Removed

This is the date that the autographic chart recorder was removed. It is a date field.

Removed By

This is the name of the commissioning engineer and is obtained from the look up table for Staff - (See lutStaffDetails)

Digitised (Y/N)

This field is a boolean field which sets whether the results from the chart recorder are digitised or not.

2.3.2.1.4.4. Mobile Assets additional details - Autographic recorders Chart Details

Additional details may be entered about the autographic chart recorder type. The user must click on the Chart Details Tab and following form will be displayed:

The screenshot shows a software window titled 'Additional Autographic Information'. At the top, there are two tabs: 'Recorder' and 'Chart Details', with 'Chart Details' being the active tab. Below the tabs, there are two input fields: 'Asset Number' with the value '118003' and 'Asset Type' with the value 'Autographic Recorder'. The main area of the form contains several fields with labels and values, some with dropdown arrows: 'Float type' is '12" Plastic'; 'Level Resolution' is '100.0' with units 'mm/metre'; 'Time Resolution' is '1.0' with units 'Hour / min'; 'Pen type' is 'Felt'; 'Range' is '2.5' with units 'metres'; 'Clock Range' is 'Weekly'; 'Chart Power' is 'Manual wind up'; 'Battery last changed' is ' / /'; and 'Paper Type' is 'Paper Chart 1028RK23/1'. At the bottom right of the form are two buttons: 'Update' and 'Close'.

Field	Value
Asset Number	118003
Asset Type	Autographic Recorder
Float type	12" Plastic
Level Resolution	100.0 mm/metre
Time Resolution	1.0 Hour / min
Pen type	Felt
Range	2.5 metres
Clock Range	Weekly
Chart Power	Manual wind up
Battery last changed	/ /
Paper Type	Paper Chart 1028RK23/1

Float Type

This field describes the type of float used on the autographic chart recorder - It is derived from a look up table (See lutChartFloatTypes)

Level resolution

This field is the water level resolution and is entered as a fixed point number (to 3 decimal places)

Time resolution

This field is the chart time resolution and is entered as a fixed point number (to 1 decimal place)

Pen type

This field describes the type of pen used on the autographic chart recorder - It is derived from a look up table (See lutChartPenTypes)

Range

This field is the chart recorder range and is entered as a fixed point number (to 1 decimal place)

Clock range

This is the range of the clock in the chart recorder and is derived from the frequencies in days look up table (See lutFrequenciesDays)

Chart power

This is the type of source of power for the chart recorder and is derived from the Chart Power types look up table (See lutChartPowerTypes)

Battery last changed

If applicable, this is the date that the user should use for the time when the battery was last replaced (only available if the chart power is a battery).

Paper type

This is the type of paper used with this chart recorder and is derived from the Chart Paper Types look up table (See lutChartPaperTypes).

2.3.2.1.4.5 Mobile Assets additional details - Sensor Information

If the mobile asset being detailed is a sensor, then by clicking on the Additional information button further details may be entered about the mobile asset. The following form will be displayed:

Additional Sensor Information

Asset Number: 110000 Asset Type: Sensor (TBAG - Shaft encoder or PTM / PTD)

Sensor Insulator

Sensor type: Pressure Transducer

Cable Length: 25.0 metres

Millimetres per tip: -

Sensor range: 10.0 metres

Overpressure range: 1.50

Date Entered: / /

Date last modified: / /

Update Close

Sensor type

This field is entered by the user and is derived from a look up table of Sensor Types (See lutSensorTypes)

Cable Length

This is the length of cable attached to the sensor and is in metres. It is a fixed point field of 1 decimal place accuracy.

Millimetres per tip

This is the size of the sensor tip and is a fixed point number of 2 decimal places accuracy.

Sensor range

This is the range that the sensor can measure in metres. It is a fixed point number of 2 decimal place accuracy.

Over pressure range

This is the overpressure range that the sensor can withstand . It is a fixed point number of 2 decimal place accuracy.

Date entered

This is a computer generated date and is the date the additional information for a sensor is first entered by the user.

Date last Modified

This is a computer generated date and is the date the additional information for a sensor was last change by the user.

2.3.2.1.4.6 Mobile Assets additional details - Sensor Installation

The following page of the additional sensor form will be displayed allowing the installation details to be entered:

The screenshot shows a web form titled "Additional Sensor Information". At the top, there are two input fields: "Asset Number" with the value "110009" and "Asset Type" with the value "Sensor (TBRS - Shaft encoder or PTM / PTD)". Below these is a tabbed interface with two tabs: "Sensor" and "Installation". The "Installation" tab is currently selected. Inside this tab, there are several input fields: "Channel Number" with the value "0", "Card type" with the value "Shaft Encoder (Variable)", "Toneburst" with radio buttons for "Y" (selected) and "N", "Parameter Scaling" (an empty text field with the note "[Only for analogue cards]"), "Installed" date field with the value "1 / 1", "by" field with the value "Engineers Name", "Removed" date field with the value "1 / 1", and another "by" field with the value "Engineers Name". At the bottom right of the form are two buttons: "Update" and "Close".

Channel Number

This is the channel number of the logger which has the sensor in question attached. It is a single digit numerical field.

Card Type

This field is the Plug in card type for that type of sensor. It is derived from a look up table (See lutSensorCardTypes).

Tone Burst

This boolean field indicates whether tone burst is in use on this installation.

Parameter scaling

This free text field allows the user to enter any scaling factors for analogue cards.

Installed date

This is the date that the sensor was installed. It is a date field entered by the user.

Installed by

This is who installed the sensor it is derived from the staff details look up table (See lutStaffDetails)

Removed date

This is the date that the sensor was removed. It is a date field entered by the user.

Removed by

This is who removed the sensor it is derived from the staff details look up table (See lutStaffDetails)

2.3.2.1.4.7 Mobile Assets additional details - Data Logger Information

If the mobile asset being detailed is a Logger (LOGG, TELE or VFWS), then by clicking on the Additional information button further details may be entered about the mobile asset. The following form will be displayed:

Additional Logger Information

Asset Number: 110009 Asset Type: Data Logger

Installation Linked Sensors

Logger type: Data Logger (With Modem)

Station ID: 10023

Software: Hydrolog

Fixed Frequency: 1

Installed: / / by Engineers Name

Removed: / / by Engineers Name

Logger telephone Number: 01223 2434234

Usage Type: Telephone usage lookup

Update Close

Logger Type

This field is the type of logger at this site. It is derived from a look up table. (See lutLoggerTypes).

Station ID

This free text field is the ID entered by the user and is up to 15 characters in length.

Software

This free text field is the Software being used and is entered by the user and is up to 15 characters in length.

Fixed Frequency

This field is the number of readings per day made by the logger. It is derived from a look up table of logger event frequencies (See lutLoggerEventFrequencies)

Installed date

This is the date that the logger was installed. It is a date field entered by the user.

Installed by

This is who installed the logger, it is derived from the staff details look up table (See lutStaffDetails)

Removed date

This is the date that the logger was removed. It is a date field entered by the user.

Removed by

This is who removed the logger it is derived from the staff details look up table (See lutStaffDetails)

Logger Telephone Number

This free text field os the telephone number of the logger if is had a dedicated phone line. It is 15 characters long maximum.

Usage Type

This field is the usage type for that logger. It is derived from a look up table (See lutLoggerUsageTypes).

2.3.2.1.4.8 Mobile Assets additional details - Linked sensors

If the mobile asset is a data logger(LOGG, TELE or VFWS) then the user can check on which sensors are linked to the logger by clicking on the Linked Sensors tab. The following form page will be displayed:

The screenshot shows a web form titled "Additional Logger Information". At the top, there are two input fields: "Asset Number" with the value "110009" and "Asset Type" with the value "Data Logger". Below these, there are two tabs: "Installation" and "Linked Sensors", with the latter being the active tab. The "Linked Sensors" tab contains three labels with corresponding input fields: "Active sensor linked to this logger", "Type of sensor linked to this logger", and "Manufacturer of sensor". At the bottom right of the form, there are two buttons: "Update" and "Close".

Active sensor linked to this logger

If the logger mobile asset being dealt with here has a sensor associated (which is active), then the sensor asset number will appear here.

Type of sensor linked to this logger

If the logger mobile asset being dealt with here has a sensor associated (which is active), then the type of sensor will appear here.

Manufacturer of sensor

If the logger mobile asset being dealt with here has a sensor associated (which is active), then the manufacturer of the sensor will appear here.

2.3.2.1.4.9 Current Meters additional details -

If the mobile asset is a Current Meter (CMTS) then the user can press the CMTS additional information button to enter more details.

The following form page will be displayed:

Impeller	Diameter	Date Last Calibrated	Calibration Reference No.	Reason
Serial 1	23	11/12/96	Ref CA 001	This unit was suspected
Serial 2	45	11/12/97	Ref 000001	Annual calibration
Serial 3	21	22/09/97	Ref Cal0003	Replacement unit
Serial 4	23	01/01/97	Calib 004	

As can be seen, this is a database lookup table allowing a number of impellers to be associated with this CMTS mobile asset.

Impeller serial number

The user must enter the serial number of each of the impellers here.

Impeller diameter

The diameter of each impeller is entered here. The field is an integer field.

Date last calibrated

The user enters here the date of the last calibration as a date field.

Calibration reference number

For each impeller there will be a calibration reference number which the user must enter as a 20 digit text field.

Reason

This field is for the reason for the calibration that was carried out.

Date entered

This is a date field and is generated by the computer.

Date last modified

This is a date field and is generated by the computer

2.3.2.1.4.10 Chart additional details

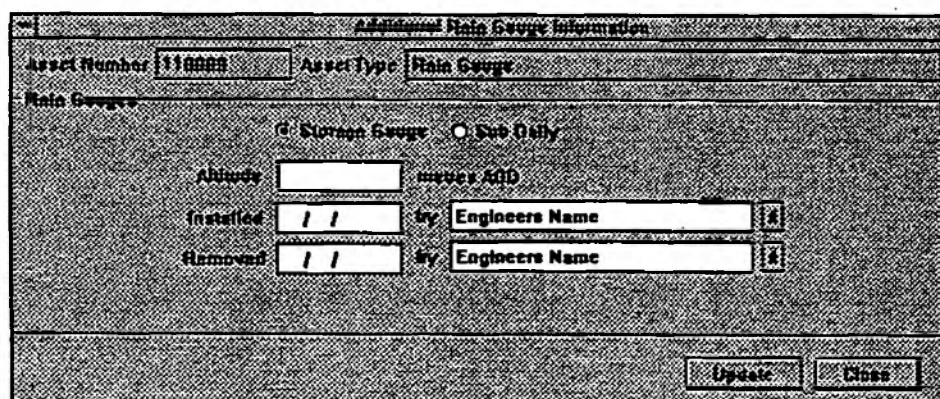

If the mobile asset is a Chart type then the user is reminded that Chart Paper is entered in the Autographic chart screens.

The following message will be displayed:

**2.3.2.1.4.11 Rain gauge additional details -**

If the mobile asset is a rain gauge then the user can enter further specific information about the rain gauge:

The following form will be displayed:

Additional Rain Gauge Information	
Asset Number	110000
Asset Type	Rain Gauge
Rain Gauge	
<input checked="" type="radio"/> Storage Gauge <input type="radio"/> Sub Daily	
Altitude	mmeters AHD
Installed	by Engineers Name
Removed	by Engineers Name
<input type="button" value="Update"/> <input type="button" value="Close"/>	

Altitude

The user must enter the altitude above the local datum of the rain gauge here as an integer field.

Installed date

This is the date that the rain gauge was installed. It is a date field entered by the user.

Installed by

This is who installed the rain gauge, it is derived from the staff details look up table (See lutStaffDetails)

Removed date

This is the date that the rain gauge was removed. It is a date field entered by the user.

Removed by

This is who removed the rain gauge it is derived from the staff details look up table (See lutStaffDetails)

2.3.2.1.4.12 Gas Sensor additional details

If the mobile asset is a Gas Sensor then the user can add additional information about the sensor types etc..

The following form will be displayed:

Additional Gas Sensor Information

Asset Number: 110001 Asset Type: Gas Detector

Gas Detector Information

Date Calibrated: 1.1

Gases Detected:

- ☐ Methane (Flammable gas)
- ☐ Carbon Dioxide
- ☐ Oxygen (Deficiency)
- ☐ Hydrogen sulphide

Battery Serial Number:

Date first charged: 1.1

Battery life: years

Update Cancel

Date calibrated

This date field is entered by the user to indicate when the last calibration was done of the gas sensor.

Gases detected

These four check boxes are stored as 4 booleans in the database table and are to indicate which of up to 4 gases can be detected by this gas sensor.

Battery serial number

The serial number of the gas sensor battery is entered here - only certain kinds of battery can be used in these gas sensors and the battery information will contain the serial number of this kind of battery.

Date last charged

This is obtained by looking up the battery information based on the above serial number.

Battery life (Years)

This is obtained by looking up the battery information based on the above serial number.

2.3.2.1.4.13 Winch additional details

If the mobile asset is a Winch then the user is reminded that there is no more information required.

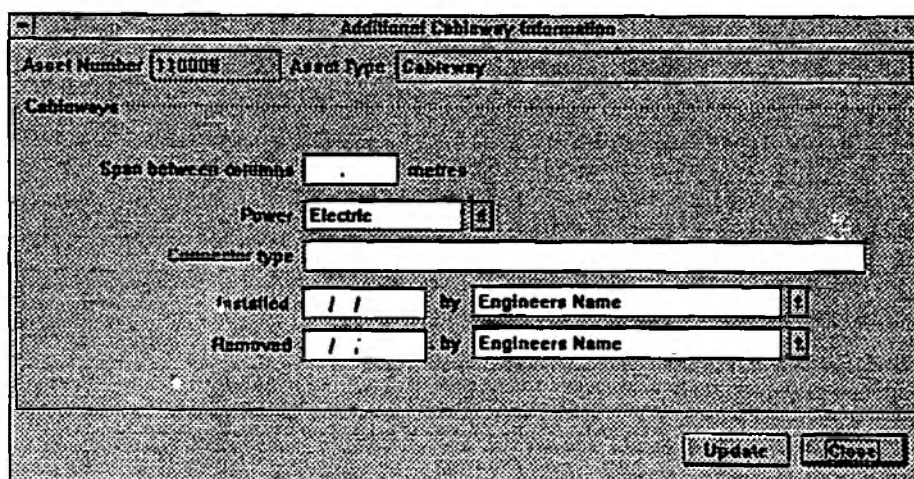

The following message will be displayed:

2.3.2.1.4.14 Cableway additional details

If the mobile asset is a Cable type then the user can add further information about the cable way.

The following form will be displayed:

Span between columns

This is the distance between supporting columns for the cableway and is in metres - The field is a fixed point number of 1 decimal place accuracy.

Power

This field is the type of power used for the cableway - It is derived from a look up table. (See lutCablewayPowerTypes)

Connector type

This free text field allows the user to type type in the cableway connector type. It is a free text field of 50 characters length.

Installed date

This is the date that the cableway was installed. It is a date field entered by the user.

Installed by

This is who installed the cableway, it is derived from the staff details look up table (See lutStaffDetails)

Removed date

This is the date that the cableway was removed. It is a date field entered by the user.

Removed by

This is who removed the cableway it is derived from the staff details look up table (See lutStaffDetails)

2.3.2.1.4.15 Bomb additional details

If the mobile asset is a bomb (suspension weight) then the user can

The following form page will be displayed:

The screenshot shows a web form titled "Add(Bomb) Bomb Weight Information". It contains the following fields and controls:

- Asset Number:** A text input field containing the value "110005".
- Asset type:** A dropdown menu with "Suspension weight" selected.
- Suspension Weight (Bomb) details:** A section header for the following fields.
- Weight:** A text input field containing the value "245".
- Connection type:** A dropdown menu with "Breystroke" selected.
- Buttons:** "Update" and "Close" buttons located at the bottom right of the form.

Weight

The user must enter the weight in Kilogrammes of the suspension weight it is a fixed point field of 1 decimal place accuracy.

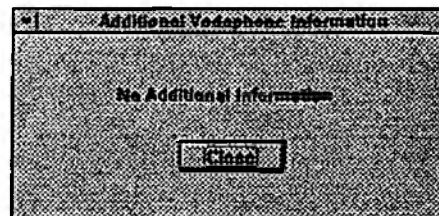

Connection type

This field is the type of connection for the suspension weight. it is derived from a look up table. (See lutBombConnectionTypes)

2.3.2.1.4.16 Vodaphone additional details

If the mobile asset is a vodaphone then there is no additional information to add. (Vodaphones are used for the utilities only).

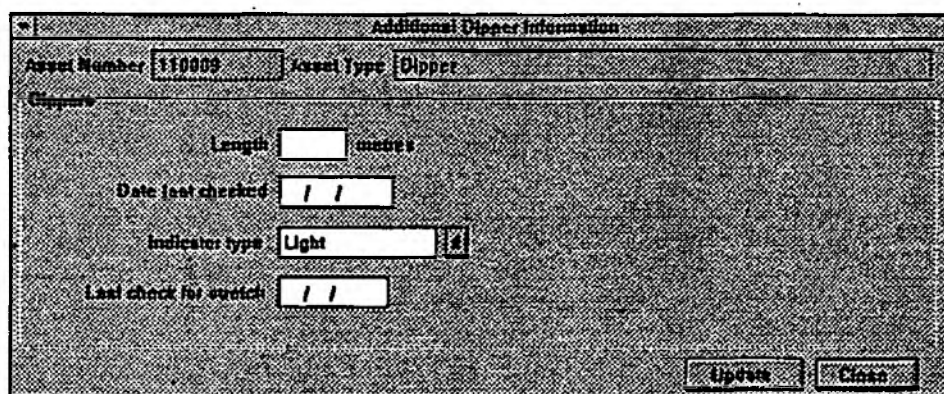

The following form page will be displayed:

2.3.2.1.4.17 Dipper additional details

If the mobile asset is a dipper, then the user can add the following information.

The following form will be displayed:

Length (Metres)

The length of the dipper is entered here by the user and is a fixed point number of 1 decimal place accuracy.

Date last checked

The date the dipper was last checked is entered here - the field is a date field.

Indicator type

The dipper or dip tone asset indicator type is entered by the user - It is derived from a look up table (see lutDipperIndicatorTypes)

last check for stretch

The date the cable was last checked for stretch is entered here - the field is a date field.

2.3.2.1.4.18 Battery and Battery batches additional details

If the mobile asset is a battery then the user has the choice of entering information about the batch of batteries (most often) or about individual batteries (such as gas sensor batteries) and can enter the following information.

The following form page will be displayed:

Additional Battery Information

Asset Number: 110005 Asset Type: Battery Batch

Battery Information

Battery Type: Re-chargeable Gas detector battery

☐ Individual ☒ Batch

Battery Serial Number:

Date first charged: 1/1

Battery Life: 10 years

Terminal / Connector type: Clamp

Update Close

Battery type

This field is the type of battery being details under this asset. It is derived from a look up table. (see lutBatteryTypes).

Individual or batch

This field is a boolean field which allows the user to indicate whether the information being entered is about a single battery or a batch of batteries. In the case of a batch then the battery serial number field is not an editable field. In the case of an individual battery then the serial number field should be enabled.

Battery serial number

As decribed above, the serial number can be entered for a single battery- It is a text field of 20 characters length.

Date first charged

The user can use this field to indicate when a battery or batch or batteries where first charged.

Battery life

The expected battery life is entered here as a fixed point field (to 1 decimal place) indicating the number of years.

Terminal / connector type

The type of terminal type for the battery are indicated here by the user - This is derived from a look up table (See lutBatteryConnectorTypes).

2.3.2.1.4.19 Dipper additional details

If the mobile asset is a dipper, then the user can add the following information.

The following form will be displayed:

The screenshot shows a window titled "Additional Dipper Information". Inside the window, there are several input fields and buttons. At the top, there are two fields: "Asset Number" with the value "110000" and "Asset Type" with the value "Dipper". Below these, there is a section labeled "Dippers" which contains a list of fields: "Length" with a value of "1" and the unit "metres", "Date last checked" with the value "1/1", "Indicator type" with the value "Light", and "Last check for stretch" with the value "1/1". At the bottom right of the window, there are two buttons: "Update" and "Close".

Length (Metres)

The length of the dipper is entered here by the user and is a fixed point number of 1 decimal place accuracy.

Date last checked

The date the dipper was last checked is entered here - the field is a date field.

Indicator type

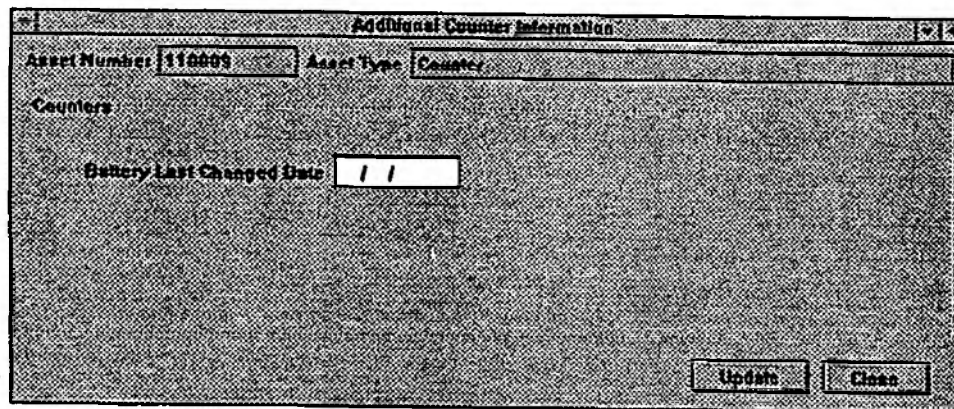

The dipper or dip tone asset indicator type is entered by the user - It is derived from a look up table (see lutDipperIndicatorTypes)

last check for stretch

The date the cable was last checked for stretch is entered here - the field is a date field.

2.3.2.1.4.20 Counter additional details

If the mobile asset is a Counter then there is no further data to enter. The following message will be displayed:

The screenshot shows a dialog box titled "Additional Counter Information". It contains two input fields at the top: "Asset Number" with the value "110005" and "Asset Type" with the value "Counter". Below these is a section header "Counters". Under "Counters", there is a label "Battery Last Changed Date" followed by a date input field containing " / /". At the bottom right of the dialog box are two buttons: "Update" and "Close".

Battery last changed date

This is used to keep a record of when batteries are changed on the counters. This is a date field.

2.3.2.1.5 Repairs and Maintenance

Only the RFMS asset types have a repair or maintenance requirement, and so only when the user clicks on the site asset and has an RFMS asset type selected in the tree of assets within the site, will the maintenance button be enabled. (Refer back to the Site details form)

The following form will be displayed for the repair and maintenance of an RFMS station when the maintenance button is pressed:

2.3.2.1.5.1 RFMS Repair and Maintenance - General

The screenshot shows a web-based form titled "RFMS Repair and Maintenance Schedules". At the top, there are two input fields: "Asset Number" with the value "110009" and "Asset Type" with the value "RFMS - River Flow Monitoring Station". Below these are four tabs: "General", "Location details", "Repair Schedule", and "Maintenance Plan". The "General" tab is currently selected. It contains several input fields: "River Name" (a long text box), "EA Reference" (a text box), "Channel Width" (a text box), "Channel Length" (a text box), "Cableway clear span" (a text box followed by "metres"), "Depth of water between" (a text box followed by "metres min" and "and" and a text box followed by "metres max"), "Grassed area" (a text box followed by "metres² flat" and "and" and a text box followed by "metres² sloped"), "Date entered" (a date picker showing "1/1"), and "Date last modified" (a date picker showing "1/1"). At the bottom right of the form are two buttons: "Update" and "Close".

This tab on the form contains further basic information about the site and does not allow the user to type specific repair requirements.

River Name

The user types in the name of the river. It is a text field of 40 characters in length.

EA Reference

This is the EA reference number which is looked up from the fixed asset database (see tableFixedAssets).

Channel Width

The user enters the channel width in metres (to 3 decimal place) to indicate the size of the RFMS structure.

Channel Length

The user enters the channel length in metres (to 3 decimal place) to indicate the size of the RFMS structure.

Cableway clear span (metres)

The user enters the cableway clear span in metres (to 3 decimal place) to indicate the size of the cableway structure.

Grassed area m² flat

The area of grass on the flat is recorded here. This is used for grass cutting maintenance.

Grassed area m² sloped

The area of grass on a sloped surface is recorded here. This is used for grass cutting maintenance.

Depth of water between minimum metres

The user enters the minimum depth of water in metres. The field is a fixed point number to 3 decimal place.

Depth of water maximum metres

The user enters the maximum depth of water in metres. The field is a fixed point number to 3 decimal place.

Date entered

This computer generated date is created when the repair or maintenance details are first entered.

Date Last Modified:

This computer generated date is created when the repair or maintenance details are last modified.

2.3.2.1.5.2 RFMS repair and maintenance - Structure details

To enter the structure details, the user should click on the Structure details tab. The following form is displayed for data entry:

The screenshot shows a software window titled "RFMS Repair and Maintenance Schedules". At the top, there are two input fields: "Asset Number" with the value "110000" and "Asset Type" with the value "RFMS - River Flow Monitoring Station". Below these are four tabs: "General", "Structure details" (which is selected), "Repair Schedules", and "Maintenance Plans". The "Structure details" tab contains the following fields: "Structure type" with a dropdown menu showing "Weir", "Structure description" with a text area containing "Structure description", and "Additional information" with a text area containing "Edin18". Below these fields is an "Add" button. At the bottom of the form is a table with four columns and three rows. The first row is shaded. The second and third rows are empty. At the bottom right of the window are "Update" and "Close" buttons.

Structure type

The user should enter the structure type here - It is derived from a look up table - See lutStructureTypes

Structure description

This read only field will be updated from the structure type here - It is derived from a look up table - See lutStructureTypes

Additional information

The user can enter further details here such as the type of weir. It is a text field.

Add button

The structure types and additional text should then be added to the table below on the form.

2.3.2.1.5.3 RFMS repair and maintenance - External Roofs / Walls repair

To enter the external wall repair requirements, the following form is displayed for data entry:

The screenshot shows a software window titled "RFMS Repair and Maintenance Scheduling". At the top, there are fields for "Asset Number" (110000) and "Asset Type" (RFMS - River Flow Monitoring Station). Below these are four tabs: "Internal walls/walls", "Structural details / Mac", "Repair Scheduling", and "Maintenance". The "Repair Scheduling" tab is active, showing a sub-tab "External roof/walls". The form contains several input fields: "Wall construction" (Block/Brick), "Roof Type" (Flat), "Construction" (Concrete Slab), "Number of Doors" (empty), "Construction" (Steel), "Number of Windows" (empty), "Construction" (Steel), "Anti Vandal Screen Fitted" (radio buttons Y, N, O), "Cableways doors construction" (Wood), and "Repairs Needed" (Structural repairs to wall). There is an "Add" button next to the "Repairs Needed" field. At the bottom, there is a table with three columns and two rows, and "Update" and "Close" buttons.

Asset Number	Asset Type	Wall construction	Roof Type	Construction	Number of Doors	Construction	Number of Windows	Construction	Anti Vandal Screen Fitted	Cableways doors construction	Repairs Needed
110000	RFMS - River Flow Monitoring Station	Block/Brick	Flat	Concrete Slab		Steel		Steel	<input type="radio"/> Y <input type="radio"/> N <input type="radio"/> O	Wood	Structural repairs to wall

Wall Construction

The construction type of the external walls is entered here. It is derived from a look up table - see lutExternalWallConstructionTypes

Roof Type

The roof type is entered here by the user, it is derived from a look up table - see lutRoofTypes

Roof Construction

The roof type is entered here by the user, it is derived from a look up table - see lutRoofConstructionTypes

Number of Doors

The user enters the number of doors in this field. It is a single digit number.

Door Construction

The door construction type is entered here by the user, it is derived from a look up table - see lutDoorConstructionTypes

Number of windows

The user enters the number of windows in this field. It is a single digit number.

Window construction

The windows construction type is entered here by the user, it is derived from a look up table - see lutWindowConstructionTypes

Anti-vandal screen fitted

The user enters whether there is an anti-vandal screen fitted to the windows. It is a boolean field. (Y or N)

Cableways door construction

The construction type of the cableway door is entered here by the user, it is derived from a look up table - see lutCablewayDoorConstructionTypes

Repairs needed

The user enters the repairs required from a look up table of possible repairs, or types in a new repair kind into the combo-edit list box. The entry is derived from a look up table or creates a new entry in the look up table. See lutExternalRepairs.

Add button

When the user clicks on this, the above repairs will be added to the repair table. (See tableRepairRequirements)

2.3.2.1.5.4 RFMS repair and maintenance - Floors repair

To enter the floor repair details, the user should click on the Structure details tab. The following form is displayed for data entry:

The screenshot shows a software window titled "RFMS Repair and Maintenance Schedules". At the top, there are two input fields: "Asset Number" with the value "110003" and "Asset Type" with the value "RFMS - River flow Monitoring Station". Below these are four tabs: "Internal walls/floors", "Internal decorations / floor", "Repair Schedules", and "Maintenance". The "Internal walls/floors" tab is selected, showing sub-tabs "General", "Structure details", "External walls/floors", and "Floors". The "Structure details" sub-tab is active. The form contains the following fields and controls:

- Floor Type:** A dropdown menu showing "Concrete". To its right is a text field labeled "If other..." with a small icon.
- Condition of wooden boards:** A dropdown menu showing "Good".
- Any sign of damp:** Radio buttons for "Y" and "N", with "N" selected.
- Is damp proof course intact:** Radio buttons for "Y" and "N", with "Y" selected.
- Remedy:** A text field containing "Replace anew".
- Add:** A button below the Remedy field.
- Table:** A table with 3 columns and 2 rows. The first row has a small icon in the third column. The second row has a small icon in the third column.
- Buttons:** "Update" and "Clear" buttons at the bottom right.

Floor Type

The type of floors in this building is entered here by the user. It is derived from a lookup table - See lutFloorTypes

If other

If the floor is of type "other" then this field is to be filled with the type of floor.

Condition of wooden boards

If the boards are wooden then this field is enabled and the user can select one of the kinds of condition of floor - It is selected from a look up table (See lutWoodenFloorConditions)

Any sign of damp

This is a boolean field which should be selected to "Y" when any damp signs have been seen. The default will be "N".

Is damp proof coarse intact

This is a boolean field which should be selected to "N" when the damp coarse shows signs of deterioration. The default will be "Y".

Remedy

This field should be used by the user if repairs are required on this fixed asset. The user can either select one of the options from the list, or type in a new repair description which will then be added to the list. The list is derived from a look up table- See lutFloorRepairTypes.

Add button

When the user clicks of this, the above repairs will be added to the repair table. (See tableRepairRequirements) The table at the bottom of the form shows the existing repair requirements for floors.

2.3.2.1.5.5 RFMS repair and maintenance - Internal Walls / Ceilings repair

To enter the structure details , the user should click on the Structure details tab. The following form is displayed for data entry:

RFMS Repair and Maintenance Schedules

Asset Number: 110000 Asset Type: RFMS - River flow Monitoring Station

General Structure details External work/height Floor

Internal wall/ceilings

Interior wall finish: Painted Are repairs needed: ☐ Y ☐ N

Type of repair: Knock off old plaster and make good

Add

Ceiling: Plasterboard/Painted Are repairs needed: ☐ Y ☐ N

Type of repair: Remove old plasterboard and renew

Add

Repair Description	Are repairs needed

Update Close

Interior Wall finish

The user enters the interior wall finish here. It is derived from a look up table (See lutInteriorWallFinishTypes.)

Are repairs needed

If the user feels that repairs are required then he will click on "Y" and this will in turn enable the Type of repair field.

Type of repair

The user can enter the type of repair here if it is required. The field is derived from a look up table or the user can enter a new repair description, which will be added to the list for future use. It derived from the look up table - See lutInteriorWallRepairTypes

Add button

When the user clicks on this, the above repairs will be added to the repair table. (See tableRepairRequirements) The table at the bottom of the form shows the existing interior wall and ceilings repair requirements.

Ceilings

The user enters the ceiling type here. It is derived from a look up table (See lutCeilingTypes.)

Are repairs needed

If the user feels that repairs are required then he will click on "Y" and this will in turn enable the Type of repair field.

Type of repair

The user can enter the type of repair here if it is required. The field is derived from a look up table or the user can enter a new repair description, which will be added to the list for future use. It derived from the look up table - See lutCeilingRepairTypes

Add button

When the user clicks on this, the above repairs will be added to the repair table. (See tableRepairRequirements) The table at the bottom of the form shows the existing interior wall and ceilings repair requirements.

2.3.2.1.5.6 RFMS repair and maintenance - Interior decorations / Miscellaneous repairs

To enter the internal decorations / miscellaneous details , the user should click on the Interior decorations / Misc tab. The following form is displayed for data entry:

The screenshot shows a software window titled "RFMS Repair and Maintenance Schedules". At the top, there are two input fields: "Asset Number" with the value "110000" and "Asset Type" with the value "RFMS - River flow Monitoring Station". Below these are four tabs: "General", "Structure details", "External work/repairs", and "Roof". The "Interior decorations / Misc" tab is currently selected. Inside this tab, there is a section labeled "Interior decorations" with a text input field containing "User defined list" and a small "x" icon to its right. Below this is an "Add" button. Further down, there are two radio button options: "Does building have mains electricity" with a radio button set to "Y" and "Is interior of building heated" with a radio button set to "Y". At the bottom of the form is a table with three columns and two rows. The first row is empty, and the second row contains some text. At the very bottom of the window are two buttons: "Update" and "Close".

Interior decorations

The user should enter any interior decorations required to the building here. The user can select either an entry from the pre-defined list of decorations, or type in a new one which will then be added to the list. (See lutInteriorDecorationsTypes)

Add button

When the user has entered the above field, clicking on this Add button will add the repair to the table of repairs. The table at the bottom of the form shows the decoration repairs required so far.

Does building have mains electricity ?

The user selects "Y" or "N" accordingly

Is interior of building heated ?

The user selects "Y" or "N" accordingly

2.3.2.1.5.7 RFMS repair and maintenance - repair schedule

The next tab allows the user to see all repairs required. The following form is displayed for data entry:

Additional repair

Any additional repair items can be added here by entering text up to 80 characters in length.

Add button

For each additional maintenance item required, the user must click on this button to add the item to the repair table

Table

This table shows the total repair tasks to be done on this station, it is derived from all the previous sub forms data which have been added. The fields are:

Type	Repair Description	Date to be done by.	Started Date	Completed Date

2.3.2.1.5.8 RFMS repair and maintenance - Maintenance Schedule

When regular maintenance is required for the RFMS station, then the user should use the repair schedule.

RFMS Repair and Maintenance Schedules

Asset Number: 110005 Asset Type: RFMS - River flow Monitoring Station

General Structure data External networks Flow Internal networks Internal structure / flow Repair schedule Maintenance schedule

Maintenance Job:

Job: Cut Grass date last done: / / Frequency of job: Twice a year

Time of year work carried out: April and September

Contractors: WR Staff Area (where appropriate): x m²

Distance upstream: metres Distance downstream: metres

Add to schedule

Maintenance schedule

Update Close

Job

This is a drop down list box with all the maintenance items available to be added to the schedule for this station - See lutMaintenanceItems

Date last done

This is the date the maintenance was last done on the station - It is a date field

Frequency of job

The regularity with which the maintenance has to be done is entered here - It is a lookup table see lutMaintenanceFrequencies

Time of year work carried out

The period in the year when the work should be done is entered here by the user. It is also a lookup table See lutMaintenancePeriods

Contractors

The names of the contractors should be entered here, also selected from a look up table - See lutMaintenanceContractors.

Area (where appropriate)

The area (such as for grass cutting) can be entered here - it is an optional parameter.

Distance upstream (where appropriate)

The distance upstream (such as for gravel and weed clearance) can be entered here - it is an optional parameter.

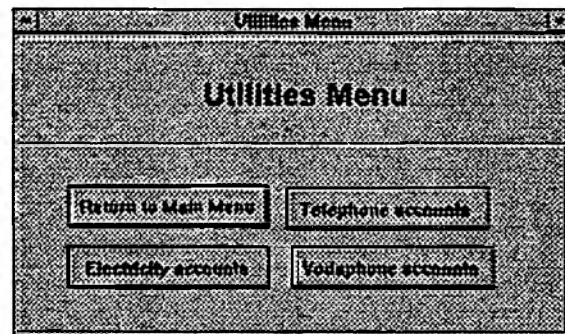

Distance downstream (where appropriate)

The distance downstream (such as for gravel and weed clearance) can be entered here - it is an optional parameter.

2.3.2.2 Utilities menu

This menu essentially give access to the Telephone, Vodaphone and Electricity accounts information in the asset database. There are some look ups within the main database by the utilities data, but the main asset database does not reference any data within the utilities.

The following shows the utilities menu:

2.3.2.2.1 Telephone accounts - Main details

To enter telephone account details, the user must click on the Telephone accounts button, and the following form will appear:

A screenshot of a form titled "Telephone Accounts". The form has a header bar with three tabs: "Main Details", "Address Details", and "Bills". The "Main Details" tab is selected. The form contains several input fields with labels and values: "Asset Type" (RFMS), "Asset Number" (100001), "Area" (South Eastern), "Asset Description" (Description of the asset), "E.A. Reference" (empty), "National Ref" (empty), "Telecom Utility Company" (Mercury), "Account reference" (empty), "Exchange" (empty), "STD Code" (01234), "Phone Number" (567890), "Dialed Number" (01234 567890), "Usage Type" (Telemetry (Levels)), "Cost Code" (A045-404-025), and "Responsible Officer" (Staff Name 7). There is a "Clear" button at the bottom right.

Asset Type

This field is the asset type of the fixed asset with a telephone account. It is derived from a lookup table (See lutAssetTypes)

Asset type description

This field is the description of the fixed asset type with a telephone account. It is derived from a lookup table (See lutAssetTypes)

Asset Number

This is the asset number which has the telephone line. it refers to the asset numbers of the main database.

Area

This is the area in which the fixed asset resides. It is a read only field as it is read from the asset database.

Asset Description

This is the description of the asset. It is a read only field as it is read from the asset database.

EA Reference

This is the EA Reference number of the asset. It is a read only field as it is read from the asset database.

National reference

This is the National Reference number of the asset. It is a read only field as it is read from the asset database.

Telecom Utility Company

This field is the name of the utility company providing the phone service. It is derived from a look up table. (See lutTelecomUtilityCompanies).

Account Reference

This is the account reference number of the phone line in question. It is a text field of 20 characters.

Exchange

This is the name of the exchange providing the service. It is a text field of 30 characters.

STD Code

This is the STD Area code for that exchange. It is a numerical field.

Phone Number

This is the phone number of the fixed asset. It is a numerical field.

Dialed Number

This field is a read only field and is derived from the STD code and Phone number above.

Usage Type

This field defines the type of use made of the phone line. It is derived from a look up table. (See lutTelecomUsageTypes).

Cost Code

This is the cost code for that phone line. It is a text field of 20 characters.

Responsible Officer

This field is the name of the officer responsible for that phone line. It is derived from a look up table. (See lutStaffDetails)

2.3.2.2.2 Telephone accounts - Additional details

To enter telephone account additional details, the user must click on the additional details Tab, and the following sub form will appear:

The screenshot shows a software window titled 'Telephone Accounts'. It has three tabs: 'Main Details', 'Additional Details' (which is selected), and 'Bill'. The 'Additional Details' tab contains the following fields and controls:

- Asset Description:** A text field with the placeholder text 'Description of the asset'.
- Notes:** A large text area with the placeholder text 'Some notes can be made here'.
- Handset on site:** A radio button control with options 'Y' (Yes) and 'N' (No).
- Government Preference Scheme:** A radio button control with options 'Y' (Yes) and 'N' (No).
- Dialed Number:** A text field containing the number '01234 567890'.
- Costings Table:** A table with three columns: 'Cost Element', '£/Qtr', and '£/Annum'. It contains three rows of data:

Cost Element	£/Qtr	£/Annum
Line Rental		
Total Cost (Y/N)		
Handset (Y/N)		
- Total (£/Annum):** A text field at the bottom right of the table area.
- Close:** A button at the bottom right of the window.

Asset Description

This is the description of the asset in question and is looked up from the asset number from the main asset database.

Notes

This field is to allow the user to any short text descriptions / notes. It is a memo field of 2 lines of 80 characters.

Handset on site

This radion button is used to indicate whether a handset is available on site to make speech calls.

Government Preference scheme

The radio button is used to indicate whether the asset is part of a government preference scheme.

Dialed number

This is the phone number of the line - It is looked up from the main details screen of the telephone accounts.

Costings Line rental Y/N

This field is always 'Y'

Costings Line rental £/QTR

The user enters the line rental cost per quarter here. It is a cost field.

Costings Line rental £/Annum

This read only field is filled in with 4 x the quarterly cost field above.

Total care Y/N

The user enters here whether there is a total care package with this line.

Total care £/QTR

The user enters here the quarterly cost for the total care package. It is a cost field.

Total care £/Annum

This read only field is calculated from the above field x 4.

Handset rental Y/N

The user enters here whether there is handset rental with this line.

Handset rental £/QTR

The user enters here the quarterly cost of the handset rental on this line.

Handset rental £/Annum

This read only field is calculated from the above field x 4.

Total £/Annum

This read only field is the sum of the right hand column and shows the total cost of the items.

2.3.2.2.3 Telephone accounts - Bill details

To enter telephone account Bill details, the user must click on the Bills Tab, and the following sub form will appear:

The screenshot shows a software window titled "Telephone Accounts". It has three tabs: "Main Details", "Address Details", and "Bills". The "Bills" tab is selected. Below the tabs is a section titled "Billing Details:" containing a table with the following columns: "Bill Date", "Call Cost", "Total Cost", "VAT", and "TOTAL". The table has three empty rows for data entry. Below the table are two date fields: "Date Entered" and "Date Last Modified", both of which contain the text "1/1". A "Close" button is located at the bottom right of the window.

For each phone bill received for this fixed asset, a table entry is completed filling the following details from the bill.

Bill Date

A date field

Call Cost

A cost field

Total Cost

A cost field

VAT

A cost field

Total

A cost field

Date entered

A computer generated date field (read only).

Date last modified

A computer generated date field (read only).

2.3.2.2.4 Electricity accounts - Main Details

To enter Electricity Account Details, the user must click on the Electricity accounts button, and the following form will appear:

The screenshot shows a software window titled "Electricity Accounts". Inside, there is a "Main Details" section with a "OK" button. The form contains several input fields: "Asset Type" with the value "RFMS" and a dropdown arrow; "Asset Number" with the value "100001" and a dropdown arrow; "Asset Description" with the value "River Flow Monitoring Station"; "E.A. Reference" and "National Ref" both empty; "Electricity Utility Company" with the value "MEB" and a dropdown arrow; "Account reference" empty; "Cost Code" and "Term" both empty. Below these is a "Notes" section with a large text area. A "Close" button is in the bottom right corner.

Asset Type

This field is the asset type of the fixed asset with a telephone account. It is derived from a lookup table (See lutAssetTypes)

Asset type description

This field is the description of the fixed asset type with a telephone account. It is derived from a lookup table (See lutAssetTypes)

Asset Number

This is the asset number which has the telephone line. it refers to the asset numbers of the main database.

Area

This is the area in which the fixed asset resides. It is a read only field as it is read from the asset database.

Asset Description

This is the description of the asset. It is a read only field as it is read from the asset database.

EA Reference

This is the EA Reference number of the asset. It is a read only field as it is read from the asset database.

National reference

This is the National Reference number of the asset. It is a read only field as it is read from the asset database.

Electricity Utility Company

This field is the name of the utility company providing the electricity. It is derived from a look up table. (See lutElectricityUtilityCompanies).

Account Reference

This is the account reference number of the electricity meter in question. It is a text field of 20 characters.

Cost Code

This is the cost code for that electricity service. It is a text field of 20 characters.

Tarrif

This is a text field detailing the tarrif type. It is a text field of 50 characters.

Notes

This field allows the user to type in notes up to 3 lines of 80 characters. (it is a memo field).

2.3.2.2.5 Electricity accounts - Bill Details

To enter Electricity Bill details, the user must click on the Bills Tab, and the following sub form will appear:

Bill Date	Start Units	Reading type	End Units	Reading type	Units used	Units Cost	Other Cost	Total Cost

Data Entered: / / Date Last Modified: / /

Close

For each electricity bill received for this fixed asset, a table entry is completed filling the following details from the bill.

Bill Date

A date field.

Start Units

The number of units at the start of the bill period. A long integer field.

Reading type

Whether estimated read etc.

End Units

The number of units at the end of the bill period. A long integer field.

Reading Type

Whether estimated read etc.

Units Used

The number of units used in the bill period. A long integer field.

Units Cost

A cost field

Other Cost

A cost field

Total Cost

A cost field

2.3.2.2.6 Vodaphone accounts - Main details

To enter Vodaphone Account Details, the user must click on the Vodaphone accounts button, and the following form will appear:

Vodaphone Accounts																		
Main Details																		
Asset Type	VODA	Vodaphone																
Asset Number	100069	Area South Eastern																
Model Reference	Description of the asset	Serial Number																
STD Code	01234	Phone Number 567890																
Issued to																		
Cost Centre	Invoice Checked																	
<table border="1"><thead><tr><th>Costs</th><th>Item</th><th>\$/Month</th><th>\$/Amount</th></tr></thead><tbody><tr><td></td><td>System Access Charge</td><td></td><td></td></tr><tr><td></td><td>Discount</td><td></td><td></td></tr><tr><td></td><td>Admin Charge</td><td></td><td></td></tr></tbody></table>			Costs	Item	\$/Month	\$/Amount		System Access Charge				Discount				Admin Charge		
Costs	Item	\$/Month	\$/Amount															
	System Access Charge																	
	Discount																	
	Admin Charge																	

Asset Type

This read only field will always be VODA (A vodaphone mobile asset).

Asset Description

This read only field will show the asset description for a vodaphone. It will come from the asset types look up tabel (See lutAssetTypes).

Asset Number

This is the number of the asset in question. It is entered by the user, or selected from the drop down list box. (VODA mobile assets only are listed).

Area

This read only field is the area of the currently selected asset. It is looked up from the main database mobile asset table. (See tableMobileAssets)

Model reference

This read only field is the model reference of the currently selected asset. It is looked up from the main database mobile asset table. (See tableMobileAssets)

Serial Number

This read only field is the serial number of the currently selected asset. It is looked up from the main database mobile asset table. (See tableMobileAssets)

STD Code

This field is a numeric field for the STD code. It is up to 10 digits in length.

Phone Number

This field is the vodaphone number (Less the STD code). It is up to 15 digits in length.

Issued to

This free text field is the name of the person who has had the phone issued to them. It is up to 30 characters in length.

Cost Centre

This free text field is the cost centre for this vodaphone. It is up to 30 characters in length.

Invoice checked

This field is a text field and the user will type in the name of the person who checked the details of this form.

System access charge £/QTR

The Access charge for this vodaphone is entered here. It is a cost field.

System access charge £/Annum

This read only field is generated by the computer and is the above field x 4.

Discount £/QTR

The discount amount for this vodaphone is entered here. It is a cost field.

Discount £/Annum

This read only field is generated by the computer and is the above field x 4.

Admin charge £/QTR

The admin charge for this vodaphone is entered here. It is a cost field.

Admin charge £/Annum

This read only field is generated by the computer and is the above field x 4.

2.3.2.2.7 Vodaphone accounts - Bill details

To enter Vodaphone Bill Details, the user must click on the Bills Tab, and the following sub form will appear:

Bill Date	Cell Cost	Distance	System Ad Distance	Admin Chg	Subtotal	VAT	Total

Date Entered: 1 / 1 Date Last Modified: 1 / 1

Close

For each vodaphone bill received, a table entry is completed filling the following details from the bill.

Bill Date

A date field

Call Cost

A cost field

Distance

System Access

A cost field

Admin Charge

A cost field

Subtotal

A cost field

VAT

A cost field

Total

A cost field

Date entered

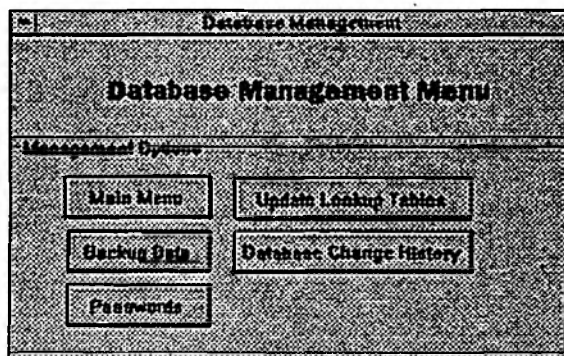

A computer generated date field

Date Last Modified

A computer generated date field

2.3.2.2.8 Supporting activities

From the Main Menu the user has access to another menu called "supporting activities". This menu appears as follows:

2.3.2.2.8.1 Update Lookup Tables

As will be apparent at this stage of the specification, there are many lookup tables involved in providing the user choices for fields with the main forms. These are all contained on a multipage form for ease of access and will take the following general format:

Lookup tables with many fields

These tables are shown on the form within a frame so as to make it obvious which items relate to that table.

For Example:

A screenshot of a form with several input fields. The fields are arranged in two rows. The first row contains: "Region" with a dropdown menu showing "Welsh", "Area Anonym" with a checkbox, and "Mobile Seed" with a text box containing "110000". The second row contains: "Area" with a dropdown menu showing "South Eastern", and "Fixed Seed" with a text box containing "100000".

Lookup tables with Single fields

These tables are shown as simple combo text and drop down list boxes. The user can simply type in a new item and the computer will ask for a confirmation of the new item and it will be added to the table.

For example:

A screenshot of a form with three dropdown menus. The first dropdown menu is labeled "Chart power types" and shows "A New Kind Of Power". The second dropdown menu is labeled "Chart float types" and shows "Power Pack". The third dropdown menu is labeled "Chart paper types" and shows "Pencil Battery", "Car Battery", "Mains supply", "Manual wind up", and "Other".

The following screens are the sub forms for look up tables:

2.3.2.2.8.2 Backup Data

Under some circumstances, there will be a need for the user to make a backup copy of the database onto disks as well as working off of the network. The following screen is an example of a simple backup facility which could support this requirement:

The exact requirements of such a system would need defining in detail at the design stage, although a requirement is to allow the user to change the directory / drive of the target backup media. When the user presses the "Change Target" button a similar dialog to the following would be displayed:

2.3.2.2.8.3 Change Database History

To maintain a history of the database versions (ie: each time the database structure or program changed) a facility similar to the following form would need to be provided:

The previous and next buttons would be used to navigate other version details.

The update button would create a new version log according to details entered on the form.

Version Number

The version number would be a text field entered by the user.

Suffix

This would be a release ID letter entered by the user

Version Date

This would be a date field entered by the user.

Details

The memo field would store up to 500 characters.

2.3.2.2.8.4 Passwords

The asset database system, as decribed in the introductory sections, has several levels of access, depending on the requirements of that person.

The following form allows the user to change the passwords for the access levels:

The Region Administrator would be able to select which level of access to change using the radio buttons, and then type in the existing access passwords and the new passwords (two fields for each to reduce the chance of typing errors from "locking out" passwords).

2.3.2.2.9 Reports

The following reports will be made available from the main menu:

All reports are simple text reports.

Additionally, some form of user defineable reports should be able to be created, for example using off the shelf database report generator software, or by a allowing simple means of adding reports to the software.

It not necessary to define each field in detail at this level of specification, however, where possible examples of the existing reports have been included:-

2.3.2.2.9.1 General Reports:

2.3.2.2.9.1.1 Current Meters / Impellers:

The following is a sample Current Meters / Impellers: report from the database

NATIONAL RIVERS AUTHORITY - WELSH

2.3.2.2.9.2 Maintenance Reports:

2.3.2.2.9.2.1 Schedule 1 (Grass cutting) contracting out reports

This report was not operable in the DOS version.

2.3.2.2.9.2.2 Schedule 2 (Weed Clearance) contracting out reports

This report was not operable in the DOS version.

2.3.2.2.9.2.3 Schedule 3 (Weircrest and gauge board cleaning) contracting out reports

This report was not operable in the DOS version.

2.3.2.2.9.2.4 Schedule 4 (Cableway maintenance) contracting out reports

This report was not operable in the DOS version.

2.3.2.2.9.2.5 Schedule 5 (gravel / silt removal) contracting out reports

This report was not operable in the DOS version.

2.3.2.2.9.2.6 Schedule 6 (Building maintenance) contracting out reports

This report was not operable in the DOS version.

3 Database Design

3.1 Overall Structure of the database

The database design is intended to be implemented using a modern relational database. It is intended that all the database tables discussed in this document are to be implemented as part of the same database, all of which will be stored on the server within each of the three areas in Wales.

3.2 Entity relationship diagram

The following figure shows the overall entity relationships of the new database design.

For simplicity, tables with similar functionality (such as additional information tables for fixed assets) have been cascaded to reduce the notation for the number of individual links which really exist.

PTO.

Entity Relationship diagram:

3.3 General notes on field checking

As can be seen from the discussions on the user interface earlier in this specification, there are many restrictions on fields in terms of length and type. Most of these have been detailed in this specification at a fairly simple level (due to the vast number of fields involved). It is envisaged that when the full design is undertaken these restrictions will need further investigation to ensure that the migrated database does not have truncated text etc.

3.4 Main Analysis of Main Tables

The following list details all the main tables within the database:

Table description	Name
<i>MAIN TABLES</i>	
Site Description	tableSiteDescription

Utilities	Telecom Utility Company	Text	35

3.5.40 Electric companies

Name: lutElectricCompanies

Section	Electricity Utility Company	Type	Restrictions
Utilities	ID		
Utilities	Electricity Utility Company	Text	20

4 Migration

4.1 Mapping Old to New Database

The old to new database mapping is relatively straightforward as most tables directly relate to a form with either version of the database and most of the relationships are the same. The main changes in structure are as follows:

- Mobile assets have a parent asset number, allowing for a mobile asset to contain several mobile assets. (In the case of loggers and sensors).
- There are now more look up tables to assist in the maintenance of the database. (The existing DOS database has some form-defined look ups which are harder to modify)
- There is now a site asset to contain fixed assets (allows for grouped assets which was not previously implemented, and also for stores / unallocated assets)

4.2 Migration Software

To reliably convert from one database to the other will take a significant amount of effort to do properly. The following process needs to be followed:

- At design time - Detail the mapping from old to new tables including fields which have been added / removed.
- At design time - Check on the size of each field, ensuring that cropping of text / truncating of numbers does not occur.
- At design time - Ensure other fields such as dates are correctly implemented (including millenium compatability checks)
- At convert time - Export the database in the most convenient format depending on the format of the new database. (Preferably using a database format rather than text if possible)
- Post Conversion - Quality Assure the database integrity - Both the engeineers and the Environment Agency should be fully involved here.
- At run time of the newly constructed database - Look for sensible values in fields of tables where possible. (ie: Alpha numeric characters in text fields etc.) This could be a program option to check for database integrity
- Test the database fully using someone who is familiar with the data to increase the chances of seeing problems.
- Overlap Period - There will be a period of time when the database is re-migrated once the tool has been used for a while after the first migration and experiments have beenb performed to test out the functionality.

It is expected that the migration software would be partly a stand-alone application to do the conversion, and partly checking code within the new database program (perhaps enabled from some option or other).

4.3 Testing the migrated database

As discussed above, it is crucial that the newly constructed database is checked thoroughly by the Environment Agency and by someone who has a high level of familiarity with the data so as to pick out any problems. The database should not be used to add data until the user was confident that the database was accuracte and bug free.

5 Appendices

5.1 Existing Dataease design

The following page details the existing entity relationships for the DOS version of the database:
