

**NRA**

*National Rivers Authority*

**Guardians of  
the Water Environment**

*Corporate Planning Section*

---

The National Rivers Authority is an effective and independent environmental watchdog.

Our prime purpose is to protect and improve the inland and coastal water environment throughout England and Wales.

Our responsibilities include water quality, water resources, flood defence, salmon and freshwater fisheries, conservation, navigation, and recreation.

The NRA is also responsible for a number of EC Environmental Directives and is generally regarded as the strongest Environmental Protection Agency in Europe.

---

This document has been produced by the Corporate Planning Section based in our Bristol Head Office with the assistance of other NRA colleagues.

The Corporate Planning Section is responsible for managing the NRA's planning and reporting processes. We assess external change, advise on future policy and priorities, develop strategies and plans, allocate resources, monitor and report on our environmental achievements and corporate performance.

## PREFACE

**River catchments** are the natural management unit around which the National Rivers Authority organises and carries out its day to day operations to protect, maintain and improve the environment. The NRA's predecessors have always been similarly organised.

**Catchment management planning** is the process by which the NRA develops catchment management plans through public consultation. The process and the plans produced also have a key role in the setting of statutory Water Quality Objectives, and their contents feed in to the statutory town and country planning and development control processes of local authorities, in which we are a statutory consultee.

Since the Prime Minister announced, in 1991, proposals to create a new Environment Agency by merging the National Rivers Authority, Her Majesty's Inspectorate of Pollution, and the Waste Regulation Authorities, the NRA has pressed for the key role of catchments to be recognised and retained in the Agency. We are pleased that the Secretary of State, Mr. John Gummer, has made such assurances in his recent Laphroaig Lecture on the 14th March 1994.

This document, which sets out our past, current and future programme of catchment management plans, is therefore very timely as preparations for the Environment Agency continue.

It has been produced to inform all of our employees, and especially catchment management planning staff in each Region and Area, of the national CMP programme. It may also be of interest for Regional Committees and other interested parties. The information presented here will be updated in our next Corporate Planning round.

The production of this document would not have been possible without the assistance of Paul Batty, Ann Binks, John Chandler, Jo Elsy, Dr Alun Gee, Sue Longstone, Gareth O'Shea, Neil Pallister, Prosper Paul, Jim Poole, Harry Stopforth, Mark Tallintire, Craig Woolhouse, Amanda Wright and Paul Wright in ensuring the accuracy of its content as at 1st April 1994.

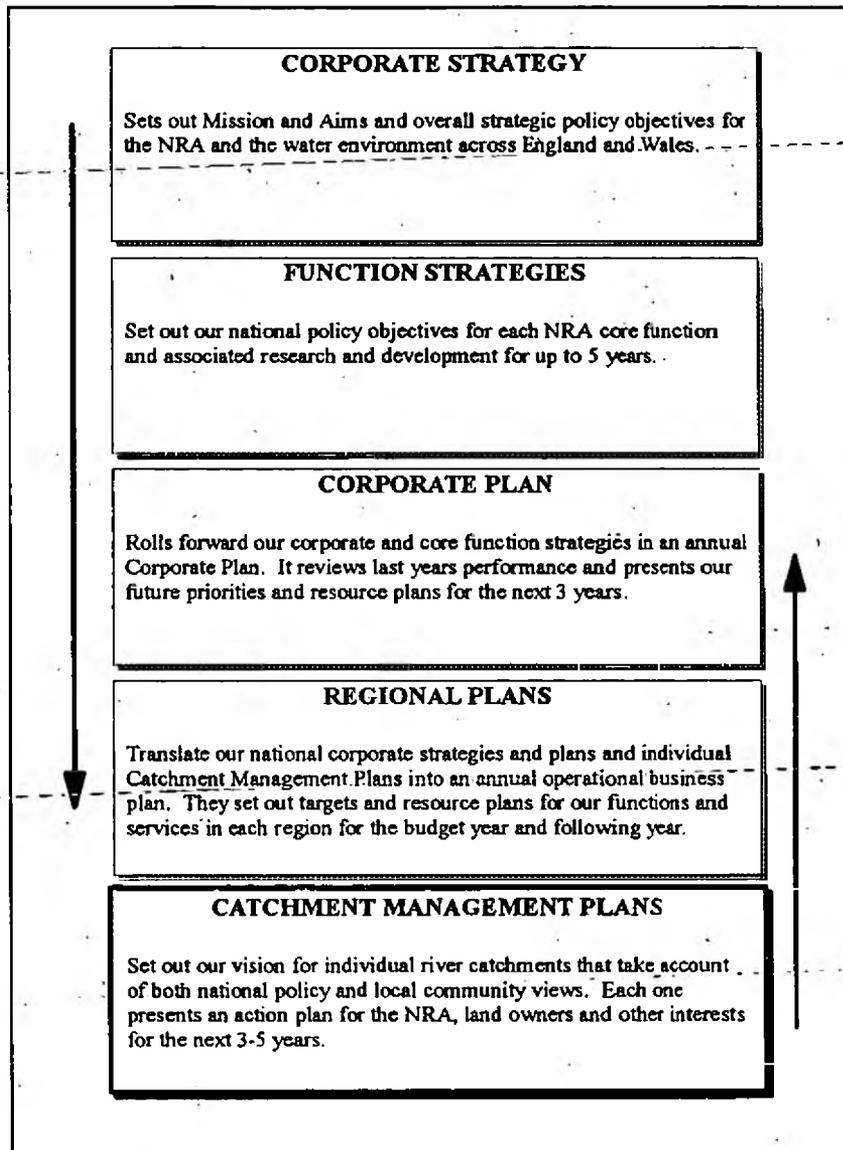

Howard Pearce  
Head of Corporate Planning

June 1994.

## INTRODUCTION

### Where do catchment management plans fit in the NRA's planning ?

The NRA corporate planning framework is based around the 5 building blocks set out below.

Catchment Management Plans are one of the most important components of the corporate planning framework as river catchments are the basic management unit around which the whole organisation and operations of the NRA are based.

What are catchment management plans ?

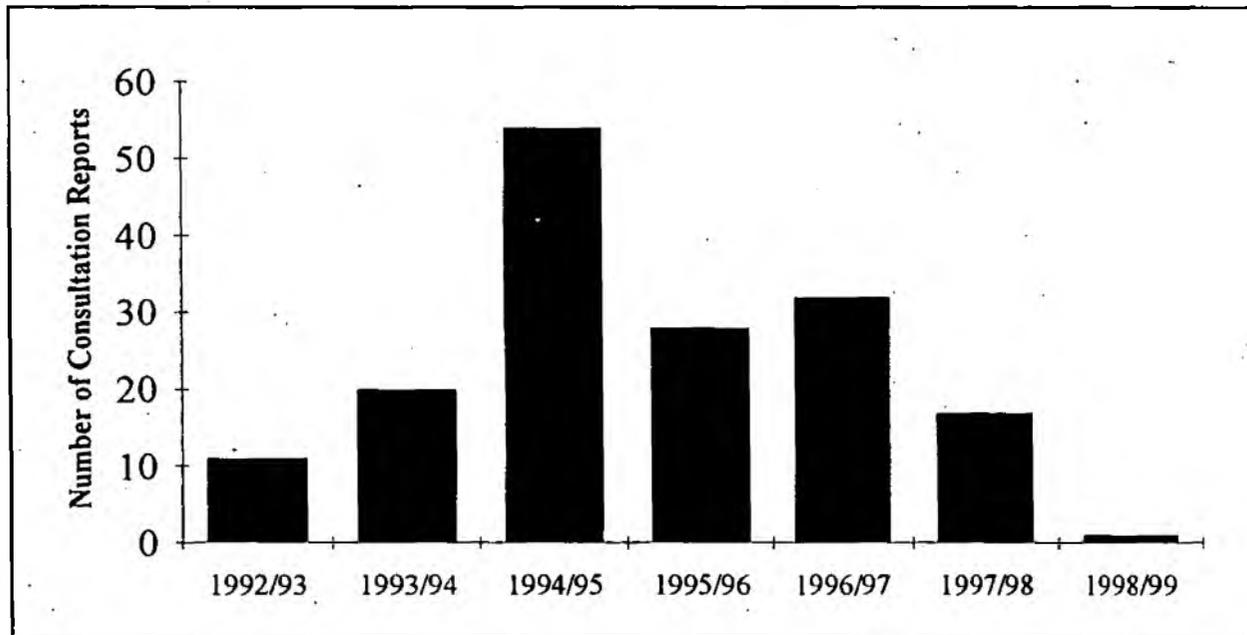

Catchment Management Plans set out the NRA's vision for the future of individual river catchments. They contain an analysis of the issues affecting each catchment, with proposed solutions and programmes of work to achieve them. Many of these can only be addressed with the cooperation or assistance of other people or organisations, so the preparation of CMPs must involve consultation with local communities and other interested parties; to this end an early stage in the production of a CMP is the Consultation Report.

What is the timetable for CMP consultation documents ?

This document shows the current timetable of Catchment Management Plan Consultation Report production as set out in each regions submission for the 1994/95 Corporate Plan. Please note that for catchment planning purposes a number of small sub-catchments have been aggregated into larger catchments in some regions. In total 163 Catchment Management Plan Consultation Reports will now be produced by 1998/99.

**Numbers of Consultation Reports Planned to be Produced in Each Year**

Actual 1992/93	Actual 1993/94	1994/95	1995/96	1996/97	1997/98	1998/99
11	20	54	28	32	17	1

Production of the Humber estuary Management Plan will involve Northumbria and Yorkshire, Severn-Trent and Anglian regions; ~~production of the Severn estuary Management Plan will~~ involve Welsh, Severn-Trent and South Western regions. To avoid double counting, these two catchments count as one third of a catchment in each contributing region. As part of a pilot statutory Water Quality Objective (WQO) scheme, some Catchment Management Plans will now include WQOs.

This report details Consultation Reports in three ways:

*Pages 5 to 18 list, and show approximate locations of, catchments with Consultation Reports due for completion in a specific year.*

*Pages 19 to 21 show the full timetable of Consultation Report production for each Region.*

*Page 22 lists catchments for which a Consultation Report or Final Plan is already available.*

Who do I contact for further information about this document ?

Any queries about the contents of this report should be referred to:

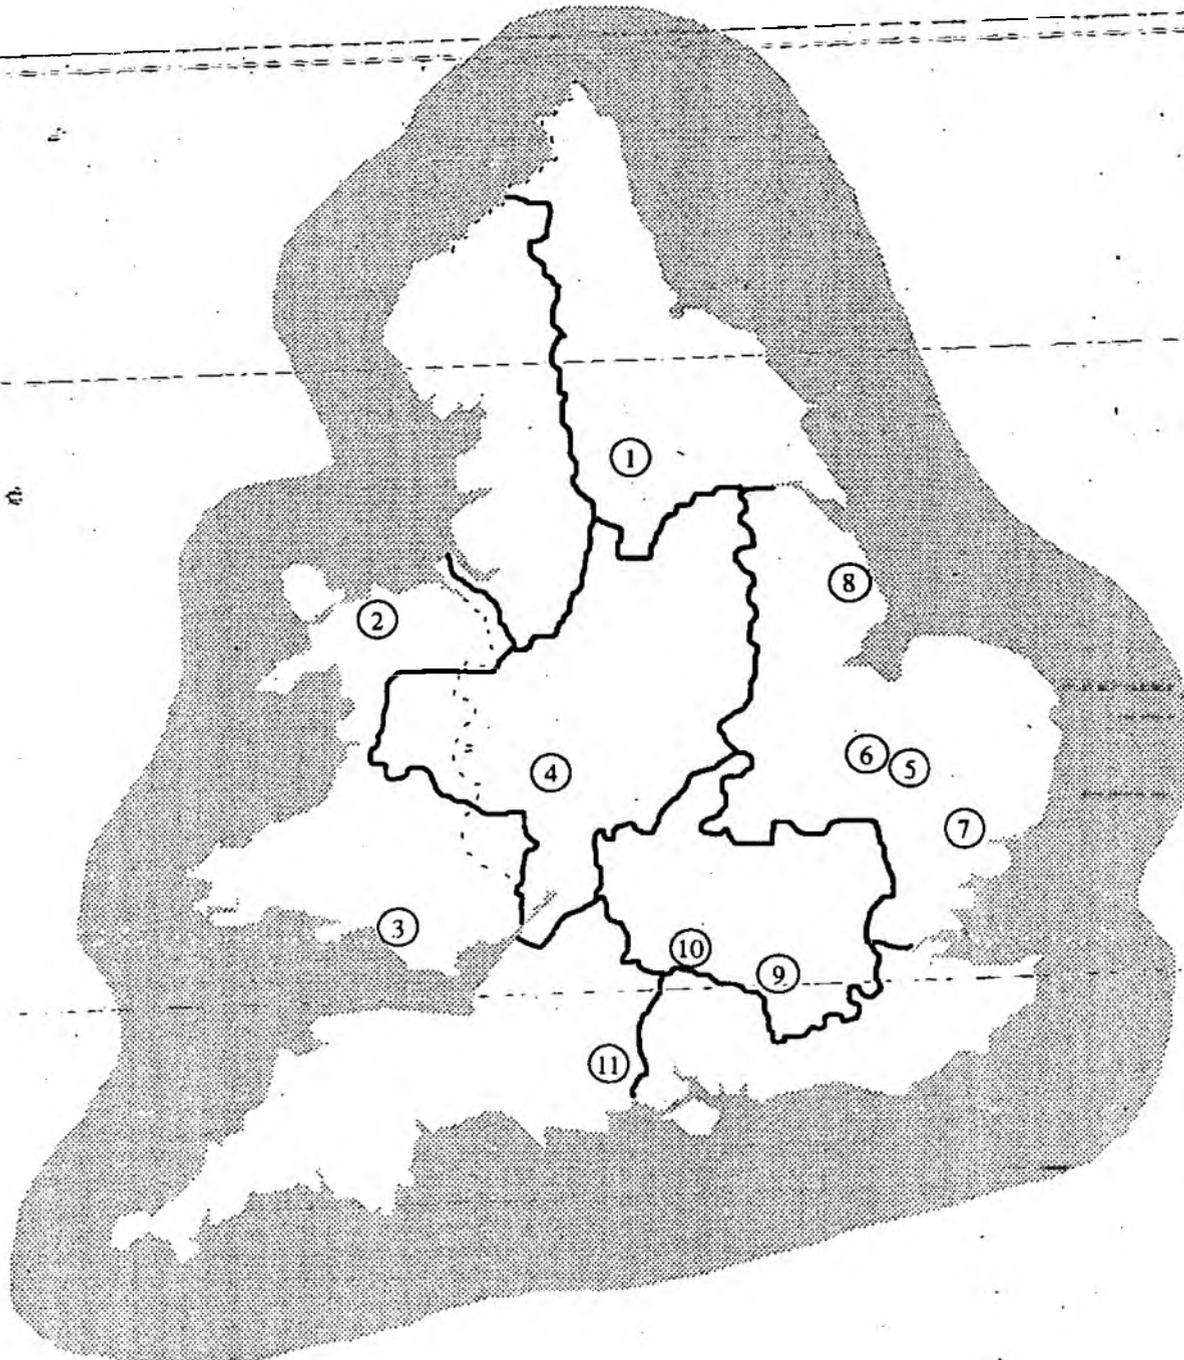

David Smith,  
Business Analyst,  
Corporate Planning Section,  
Head Office,  
Bristol.  
0454-624352.

Copies of individual catchment management plans can be obtained from each Regional HQ or the relevant Area office.

  - 30 Ely
  - 31 Thaw

## JOINT

- A Severn Estuary
- B Humber Estuary

Produced by Corporate Planning, Bristol Head Office, in liaison with NRA regions, June 1994.  
 This map has been compiled on the basis of information supplied by NRA regions to the Northumbria & Yorkshire Drawing Office. When preparing detailed catchment management plans for some locations, the precise boundaries may show minor variations when plotted on a larger scale.  
 Printed on Challenger Velvet TCF.
