Severn-Trent Region*

## PUBLISHING INFORMATION

This report has been produced in September 1995 by the Water Quality Section in the NRA Severn-Trent Region, Solihull. There is an accompanying non-technical summary document "River Water Quality in the Midlands 1994/95; Looking after water quality in the National Rivers Authority Severn-Trent Region".

For more information on the reports or for further copies please contact:-

The NRA has a duty under section 190 of the 1991 Water Resources Act and Access to Environment Information Regulations to keep a register of information on consents and sample results. This register is open to the public and we will provide information from the register on request.

If you wish to find out more about our operational work in looking after water quality or our other functions please contact our area staff. We welcome your assistance in our work by reporting pollution or other problems. Our area addresses and telephone numbers are given on the inside back cover of this report.

# INTRODUCTION

In its role as "Guardian of the Water Environment", the NRA produces and uses large amounts of information on water quality, fisheries and water resources. We enforce European and UK legislation, which have schemes of environmental quality standards, consents to discharge with conditions and river quality grading. As a matter of law and policy the NRA makes a wide range of information on its activities available to the public on request.

This data report includes summaries of data associated with some of our major activities. Details of the relevant EC and UK quality standards protocols are also included. Practical questions of space, limit the amount of information that has been provided but we would welcome suggestions as to other information that should be considered for inclusion in future data reports.

# RIVER QUALITY CLASSIFICATIONS GQA 1990/94 AND TRIENNIAL QUALITY DATA

The following tables give selected chemical, biological and flow data on all classified rivers and canals in the region in catchment order.

The network of rivers and canals has been split into stretches since 1979. A review of stretches and sampling programme was carried out in 1994, more than 1260 stretches are now routinely sampled. 12 samples are taken annually at all GQA sites for chemical analysis and a majority have complementary biological monitoring carried out at a frequency of 3 samples per year.

Blocks of three years routine sample data were used for classification in 1988/89/90 and 1992/93/94. Details of the scheme are in the appendix.

A comparison of GQA grade from period to period allows identification of problems and progress on achievement of improvements. The GQA scheme tends to give relatively large numbers of apparent grade changes from year to year. This is owing to the method of calculation which gives a "Face Value" grade which takes no account of whether the change is significant in a statistical sense or whether it is the result of the nature of environmental measurements which tend to be very variable. In order to cope with that situation it is possible to use standard statistical confidence testing procedures to highlight those changes in which there is good confidence. Those stretches showing GQA upgrades in which there is 95% confidence are given in italics and downgrades in bold. Tables list the Rivers Severn and Trent and Canals in catchment order.

The column marked RQO gives the NRA long term River Quality Objective set in River Ecosystem Classification Scheme terms. RQO given have been the subject of consultation in the Catchment Management Planning (CMP) process. It is planned to have RQO for all stretches by April 1996. CMP also propose short term quality objectives which will be the basis for any proposed Statutory Water Quality Objectives (SWQO).

Stretches designated as salmonid (S) or Cyprinid (C) fisheries under the EC Fisheries Directive are listed. A review of designations under this directive is in progress.

For triennial data, over 1260 sites are summarized, using various quality determinants. A key to abbreviations is given below.

MDF	Mean daily flow m <sup>3</sup> /s
BOD ATU	5 day BOD ATU inhibited mg/l
NH <sub>3</sub> T N	Total ammonia as N mg/l
DO % SAT.	Dissolved oxygen percent saturation mg/l
NH <sub>3</sub> U A	Unionised ammonia as NH <sub>3</sub> mg/l
BMWP	Macro-invertebrates BMWP score

For each determinand, the mean, standard deviation, the relevant percentile and number of samples are given (represented in the "Key Stats." column by m, sd, n and % ile). The relevant percentiles are as follows BOD, total ammonia 90th; dissolved oxygen 10th and unionised ammonia 95th. For biological information, BMWP scores were averaged over the 3 year period.

## EC DIRECTIVES REPORTING 1994

Sampling and reporting on three EC Directives was carried out in 1994: Dangerous Substances 76/464 EEC, Freshwater Fisheries 78/659 EEC and Surface Water Abstraction 75/440 EEC.

From 1996 the UK and European partners in the EU will be required to report directives in a more systematic way according the provision of the Standardised Reporting Directive 91/692/EEC

In future years we will report on the Nitrate Directive 91/676 EEC and the Urban Wastewater Directive 91/271 EEC, when monitoring and reporting protocols are worked out by the government.

The following tables give information on non-compliances for the various directives and reasons where these have been found.

**EC DIRECTIVES NON-COMPLIANCE 1994 – Surface Water Abstraction Directive**

Watercourse	Site & Sample Pt. Code	Det.	Standard	No.fails/ No.samples	Reason
River Severn	Barbourne(Worcester) 00031250	Lead	0.05	1/2	Associated with suspended solids. River in spate.
		Hydrocarbons	0.2	2/4	Unknown
River Severn	Trimpley 00039406	Hydrocarbons	0.2	1/2	Marginal failure, reason unknown. Subsequent samples satisfactory.
River Avon	Avon (Rugby/Brownsover) 04803760	Hydrocarbons	0.2	1/2	Unknown. No visible oil at the time sample was taken.
River Leam	Campion Hills 10928080	Hydrocarbons	0.2	1/2	Unknown. No visible oil at the time sample was taken.
River Teme	Whitbourne 13605370	Hydrocarbons	0.2	1/2	Laboratory error suspected, being checked.
Lake Vyrnwy	Llanforda 30697170	Phenols Colour	0.001 20	1/2 2/2	Limit of detection failure. Lowest concentration measurable by laboratory higher than EQS. Derogation granted due to natural geological conditions.
River Derwent	Little Eaton 49698850	PAH	0.0002	2/9	Unknown. May reflect the industrial nature of part of the catchment.
River Derwent	Bamford (Ladybower) 49712870	Hydrocarbons	0.2	1/1	Unknown. Possible contamination at sample point.
River Derwent	Howden 49714900	PAH	0.0002	1/4	Unknown

95% of all samples should pass the EQS (1 failure in 12 is allowed)

EC DIRECTIVES NON-COMPLIANCE 1994 – Dangerous Substances, List I

Watercourse	Site and Sample Pt Code	Determinand	EQS µg/l	Mean µg/l	Reason
R Severn	Shelton 00055140	Cadmium	1	1.05	Ongoing investigations have not identified the source of the contamination. Extra sampling is in place on the River Severn, River Perry and Afon Vyrnwy. Investigations will continue.
Minsterley Bk	Minsterley (Snailbeach Reclamation Scheme) 29577380	Cadmium	5	5.16	Contaminated land reclamation scheme has now almost been completed. A new site lagoon has been installed which will incorporate polyelectrolyte treatment.
R Tame	Chetwynd	Trichlorobenzene	0.4	2.1	There are no known sources of TCB in the catchment. One very high value caused the failure at this site. The result is out of character with other results from this site.

EQS expressed as the annual average

EC DIRECTIVES NON-COMPLIANCE 1994 – Dangerous Substances, List II

Watercourse	Site	Determinand	EQS µg/l	Mean µg/l	Max. µg/l	Reason
R Severn	Aberbechan 00065870	Copper	1	2.8	5.4	Elevated background levels due to metal enriched bed rock

Wom/Penn Bk	Smestow Confluence 23647020	Copper	10	13.6	24.5	Low dilution in watercourse. Copper may be from tap water. Tap water contains copper adding to load from sewage effluent
Lightmoor/Ketley Bk	Ketley Sands 28064500	Total zinc	500	674	905	Leaching from old mine workings.
Minsterley Bk	Minsterley 29577380	Total zinc	250	770	1180	A discharge from Snailbeach reclamation scheme. On site lagoon with polyelectrolyte treatment is now installed.
A Cerist	Old Channel O'Flow 35287660	Total zinc	250	15233	16300	Contaminated land associated with Y-Fan lead mine. Land reclamation and watercourse diversion complete. Wet land lagoons installed.

EQS for metals expressed as the annual average. Dissolved metals quoted unless stated otherwise.

EQS for cyfluthrin expressed as 95 percentile.

## EC Directives non-compliance 1994 - Dangerous Substances, List II

Watercourse	Site	Determinand	EQS µg/l	Mean µg/l	Max. µg/l	Reason
R Tame	Tame Bridge 59015550	Copper	28	29.1	69.9	The high copper at this site is influenced by historic tip sites. Further investigations are planned at the individual sites for 95/96.
R Tame W'ton	Bescot Us Ford Bk 59022250	Nickel  Copper	200  28	260.1  55.2	428  141	Historic contaminated groundwater infiltration from old shallow mineworkings. Exact source of pollution unknown. Further investigations planned for 95/96. Suspect diffuse source.

**(i) GQA Chemical Grading for Rivers and Canals**

Water Quality	Grade	Dissolved Oxygen	BOD (ATU) <sup>1</sup>	Ammonia
		(% saturation) 10-percentile	(mg/l) 90-percentile	(mgN/l) 90-percentile
Good	A	80	2.5	0.25
	B	70	4	0.6
Fair	C	60	6	1.3
	D	50	8	2.5
Poor	E	20	15	9.0
Bad	F <sup>2</sup>			

<sup>1</sup> as suppressed by adding allyl thio-urea  
<sup>2</sup> ie. quality which does not meet the requirements of grade E in respect of one or more determinands.

The overall grade assigned to a river or canal reach is determined by the worst of the three grades for the individual determinands.

The new grades are defined in terms of the 90 percentile for BOD and ammonia and the 10 percentile for dissolved oxygen.

**(ii) Rivers Ecosystem Classification**

The Surface Waters (River Ecosystem) (Classification) Regulations 1994, SI 1994 No. 1057, prescribe a system for classifying the quality of rivers and canals to provide the basis for setting statutory river water quality objectives (WQOs) under section 83 of the Water Resources Act 1991 in respect of individual stretches of water.

The River ecosystem classification comprises five hierarchical classes, in order of decreasing quality: RE1, RE2, RE3, RE4 and RE5. The criteria which samples of water are required to satisfy are set out in the table below.

Regulation 3 of the Surface Waters (River Ecosystem) (Classification) Regulations 1994 provides that certain matters relevant to the assessment of compliance with the requirements prescribed for each of the quality classes RE1-RE5 are to be determined by the NRA in accordance with the procedures and principles set out in this document.

Class	Dissolved Oxygen % saturation 10 percentile	BOD (ATU) mg/l 90 percentile	Total Ammonia mg N/l 90 percentile	Un-ionised Ammonia mg/ N/l 95 percentile	pH lower limit as 5 percentile upper limit as 95 percentile	Hardness mg/l Ca CO <sub>3</sub>	Dissolved Copper μg/l 95 percentile	Total zinc μg/l 95 percentile

### **(iii) Classification of Estuaries and Tidal Waters**

The classification of estuaries and tidal waters has been carried out using the scheme devised by the Department of the Environment Estuaries Working Party.

**Overall classification** The following tables show the allocation of points. The points awarded to each area under the headings of biological, aesthetic and water quality are summed, and the areas classified according to the following scale.

<b>Classification</b>	<b>Number of Points</b>	<b>Description</b>
Class A	30-24	Good Quality
Class B	23-16	Fair Quality
Class C	15-9	Poor Quality
Class D	8-0	Bad Quality

Classification of an estuary is summarised according to the length in each class. The length of an estuary should normally be measured along its centre line from the landward limit to the seaward limit of the survey. Where the classification is different from one side to the other, the length of estuary affected should be allocated proportionally between the different classes.

## **Allocation of points for the Estuarial Quality Classification Scheme**

Description	Points awarded if the estuary meets this description
-------------	---

***Biological Quality (Scores under a, b, c & d to be summed)***

- (a) Allows the passage to and from freshwater of all relevant species of migratory fish, when this is not prevented by physical barriers. Relevant species include salmonids, eels, flounders and cucumber smelts etc. 2

(b) Supports a residential fish population which is broadly consistent with the physical and hydrographical conditions 2

(c) Supports a benthic community which is broadly consistent with the physical and hydrographical conditions 2

(d) Absence of substantially elevated levels in the biota of persistent toxic or tainting substances from whatever source 4

**Maximum number of points** 10

**Aesthetic Quality** (Choose one description only)

- |     |  |    |
|-----|--|----|
| (a) | Estuaries or zones of estuaries that either do not receive a significant polluting input or which receive inputs that do not cause significant aesthetic pollution | 10 |
| (b) | Estuaries or zones of estuaries which receive inputs which cause a certain amount of aesthetic pollution but do not seriously interfere with estuary usage         | 6  |
| (c) | Estuaries or zones of estuaries which receive inputs which result in aesthetic pollution sufficiently serious to affect estuary usage                              | 3  |
| (d) | Estuaries or zones of estuaries which receive inputs which cause widespread public nuisance  | 0  |

#### **Water Quality (Score according to quality)**

Dissolved oxygen exceeds the following saturation values:

60%	10
40%	6
30%	5
20%	4
10%	3
below 10%	0

**(v) Dangerous Substances Directive List I and II Substances.**

List I of families and groups of substances

- 1 Organohalogen compounds and substances which may form such compounds in the aquatic environment.
- 2 Organophosphorus compounds.
- 3 Organotin compounds.
- 4 Substances proven to possess carcinogenic properties.
- 5 Mercury and its compounds.
- 6 Cadmium and its compounds.
- 7 Persistent mineral oils and hydrocarbons of petroleum origin.
- 8 Persistent synthetic substances which may float, remain in suspension or sink, and which may interfere with use of the waters.

List II of families and groups of substances

- 1 The following metalloids and metals and their compounds.

zinc	selenium	tin	vanadium
copper	arsenic	barium	cobalt
nickel	antimony	beryllium	thallium
chromium	molbdenum	boron	tellurium
lead	titanium	uranium	silver

- 2 Biocides and derivatives not in List I.
- 3 Substances having a deleterious effect on taste/smell of products for human consumption from the aquatic environment.
- 4 Silicon compounds.
- 5 Inorganic compounds of phosphorus.
- 6 Non-persistent mineral oils and hydrocarbons of petroleum origin.
- 7 Cyanides and fluoride.
- 8 Substances which could adversely affect the oxygen balance especially ammonia and nitrates.

**Sampling and Reporting**

12 samples per year are required unless the watercourse is of very good quality when a derogation to 6 samples per year exists. 95% of all samples should pass the stated limits - one failure in 12 is allowed. Currently this region only reports compliance of Temperature, dissolved oxygen, pH, un-ionised ammonia, ammonia and zinc.

#### **(ix) Water quality criteria for freshwater fish**

## **Quality standards for EIFAC (Reference - Alabaster and Lloyd)**

## 1 Finely Divided Solids

<b>AV Concentration</b>	<b>Effect</b>
$\leq 25 \text{ mg/l}$	No harmful effects
25-80 mg/l	Good to moderate fisheries
80-400 mg/l	Unlikely to support good fisheries
$> 400 \text{ mg/l}$	Poor fisheries

There is no sharply defined concentration of a solid above which fisheries are damaged and below which they are unharmed. The above table uses arbitrarily defined categories.

## 2 pH Value

pH Range	Salmonid	Cyprinid
3.0- 3.5	Survival unlikely for more than a few hours	
3.5- 4.0	Lethal	Can survive after acclimation
4.0- 4.5	Harmful	Some species can breed
4.5- 5.0	Harmful to eggs/fry	Harmful to carp
5.0- 6.0	Unlikely to be harmful unless free CO <sub>2</sub> ≥20 mg/l	
6.0- 6.5	Unlikely to be harmful unless free CO <sub>2</sub> ≥100 mg/l	
6.5- 9.0	Harmless	
9.0- 9.5	Harmful	Harmful to perch
9.5-10.0	Lethal over long period	Harmful to developmental stages
10.0-10.5	Lethal over a prolonged period	
10.5-11.5	Lethal	

### 3 Temperature

Tolerance depends on factors such as species, development stage, season, acclimation temperature, dissolved oxygen.

## 4      Ammonia

Only the unionised fraction is toxic. A level of 0.025 mg/l NH<sub>3</sub> (0.021N) causes adverse effects.

Ammonia is influenced by pH (more toxic in alkaline), temperature, free CO<sub>2</sub>, dissolved oxygen, and salinity.

## 5 Monohydric Phenols

<b>Salmonid</b>	<b>Cyprinid</b>
1.0 mg/l (maximum Conc) phenol, cresol, xylene	2.0 mg/l (maximum Conc) phenol, cresol, xylene

Where temperature is lower than 5°C these concentrations may have to be halved.

Phenol is influenced by temperature, dissolved oxygen salinity.

## **6 Dissolved Oxygen (Guidance Values)**

**Salmonid**      **Cyprinid**

**Solubility is affected by temperature.**

7 Chlorine

Temp (C)	pH 6	Concentration (ug/l)			pH 9
		pH 7	pH 8		
5	4	5	11		
25	4	5	16	75	121

Approximate total concentration of chlorine corresponding to 4 ug HOCL/l

Chlorine is toxic as hypochlorous acid.

8 Zinc

Hardness (mg/l as CaCO <sub>3</sub> )	Salmonids (mg/l)	Cyprinids (mg/l)
10	0.03	0.3
50	0.2	0.7
100	0.3	1.0
500	0.5	2.0

Maximum annual 95 %ile concentrations of soluble zinc.

9 Copper

Hardness (mg/l as CaCO <sub>3</sub> )	50 %ile (ug/l)	95 %ile (ug/l)
10	1.0	5.0
50	6.0	22.0
100	10.0	40.0
300	28.0	112.0

Approximate maximum annual 50 and 95 percentile concentrations of soluble copper for rainbow trout.

Zinc and copper concentrations are affected by factors such as temperature, dissolved oxygen, pH hardness, suspended solids.

10 Cadmium

Hardness (mg/l as CaCO <sub>3</sub> )	50 %ile (ug/l)	Trout		50 %ile (ug/l)	Perch 95 %ile (ug/l)
		95 %ile (ug/l)	50 %ile (ug/l)		
10	0.3	0.6	10	20	
50	0.4	0.9	15	30	
100	0.5	1.0	19	38	
300	0.75	1.5	25	50	

Approximate maximum annual 50 and 95 percentile concentrations of soluble cadmium for trout and perch.
