THE 1993 NATIONAL COASTAL BASELINE SURVEY RESULTS**Introduction**

The NRA national coastal baseline surveys were carried out as a coordinated programme by the 4 survey vessels operated by Northumbrian & Yorkshire, Anglian, South Western and North West regions.

Samples were taken at 186 pre-identified sites between Berwick on Tweed and the Solway Firth. They were analysed mainly in laboratories within the 4 regions. Analysis was carried out for chlorophyll-A, nutrients, organic contaminants, suspended solids, dissolved and total metals.

In addition, the vessels continuously monitored water along their tracks for pH, temperature, dissolved oxygen, salinity, light transmittance, chlorophyll and depth.

All results and data were passed to the South Western Region Process Investigations Section at Bridgwater, Somerset where they were processed and combined into national baseline and continuous monitoring databases.

The Results Package

The package contains the results of the analysis of baseline samples and continuously monitored data from the 1993 surveys around the whole coast of England and Wales.

This not only simplifies the procedure involved in preparing the information for distribution but also enables regions to put the data from their own coastal waters into the national context.

The package comprises:-

i) This document, including 34 appendices:-

Nos. 1 - 3 showing the location of the baseline sampling points, the coast monitored by each of the 4 coastal survey vessels including the on-board monitoring systems and the lines flown by the aircraft carrying the remote sensing monitors.

Nos. 4 & 5 are excerpts from the Lotus 1-2-3 files referred to in ii) below.

Nos. 6 - 29 are various graphs of the results obtained from the laboratory analysis of the samples from each of the 186 baseline sites during 3 surveys in 1993.

Nos. 30 - 34 are examples of charts derived from the data on the Exabyte tape referred to in iii) below. These have been reduced here to A3 size for convenience but A0 size charts can be made available on request to regions which require them and do not have the facilities to produce them from the data on the Exabyte tape.

2.

- ii) 2 no. 3.5 " floppy discs with the results of the analysis of the samples in ASCII (Text) and Lotus 1-2-3 formats.

Disc 1 contains Lotus 1-2-3 files named as follows:-

1_93_1cc.wk3 - Jan/Feb 1993 nutrients & dissolved metals
1_93_2cc.wk3 - Jan/Feb 1993 total metals
2_93_1cc.wk3 - May/Jun 1993 nutrients & dissolved metals
2_93_2cc.wk3 - May/Jun 1993 total metals
3_93_1cc.wk3 - Aug/Sep 1993 nutrients & dissolved metals
3_93_2cc.wk3 - Aug/Sep 1993 total metals

Disc 2 contains delimited ASCII files named as follows:-

Jan93_1.txt - Jan/Feb 1993 nutrients & dissolved metals
Jan93_2.txt - Jan/Feb 1993 total metals
May93_1.txt - May/Jun 1993 nutrients & dissolved metals
May93_2.txt - May/Jun 1993 total metals
Aug93_1.txt - Aug/Sep 1993 nutrients & dissolved metals
Aug93_2.txt - Aug/Sep 1993 total metals

** NB. Results below the limit of detection are expressed as negative numbers.**

- iii) 1 no. Exabyte tape which contains a Unix tape archive (tar) file which can be restored under Unix to provide EasiCad charts of the parameters continuously monitored on board the coastal survey vessels.

These files can be restored under Unix using the command "tar-xvf/dev/rst0"

- iv) Super VHS video tapes copied from the infra-red video recorder carried in the remote sensing aircraft and showing thermal features along the coast.

Unlike i) - iii) above, regions will only receive videos of their own section of the coastline.

No other remotely sensed imagery has been included with these results but a "Picture book" disc is being prepared for distribution shortly. This will show examples of I.R. and compact aerial spectrographic imagery (CASI) demonstrating discharge and riverine mixing zones, distribution patterns and calibrated images of chlorophyll concentration.

In case of difficulty or for further information, please contact the following at the Bridgwater office:-

General information -	Nick Holden or Keith Taylor
Laboratory data & Exabyte tape	Emmanuel Wensink or Sue Webster
EasiCad Charts -	Nick Collier or Nick Holden
