NATIONAL RIVERS AUTHORITY - SOUTHERN REGION

REGIONAL RIVERS ADVISORY COMMITTEE - 19TH JANUARY 1993

WATER QUALITY 1992

1. Introduction

This paper describes the overall position for River Water Quality achieved against objectives for 1992 and compares this with the situation in 1991. It has been compiled on NWC Criteria as the Quality Assessment Scheme For Rivers proposed by the NRA a part of the SWQO Scheme, is currently at public consultation following the publication of the Government's Paper on "River Quality".

The Appendices include a full listing of quality status for all classified reaches in 1992 together with a detailed breakdown of improvements and deteriorations from the 1991 position.

A detailed report on Bathing Water Quality in 1992 is also appended.

2. Regional River Quality Overall

The overall river quality as Length in each class (km) is shown in Table 1.

TABLE 1

RIVER CLASSIFICATION - LENGTH IN EACH CLASS (Km)							
YEAR	TOTAL	1A	1B	2	3	4	% (1+2)
1991	2185	594	1064	392	121	15	92.3
1992	2185	453	1221	430	70	11	96.3

Table 1 shows that the modest overall improvement recorded in 1991 (1.5%) has been sustained and improved further in 1992 by 4.0%. Classes 1 and 2 show an overall increase of 54 km largely due to improvement in the lower classes (55 km) which is encouraging. The loss of Class 1A to Class 1B is disappointing, but serves to indicate the weather pattern which demonstrated dry conditions until midsummer, followed by very high Autumn rainfall.

A complete listing of Quality status for all classified Reaches in Southern Region is presented at Appendix 1, whilst detailed reasons are provided in Appendix 2.

### 3. Compliance With Quality Objective

Table 2 shows that improvement has continued in Kent and on the Isle of Wight, with Sussex maintaining its 1991 level, whilst Hampshire has deteriorated resulting in an additional 11km failing their Quality Objective in the Region relative to 1991.

TABLE 2

<u>COMPLIANCE WITH QUALITY OBJECTIVE BY COUNTY</u> <u>% OF RIVER LENGTHS MEETING OBJECTIVES</u>					
	Iow	Hants	Sussex	Kent	Total
% in Class 1991	61	88	81	71	-
% in Class 1992	66	81	81.6	74	-
Length (km) Failing Objectives 1991	34	84	144	195	457
Length (km) Failing Objectives 1992	29.5	135.6	138.8	163.4	467.3

This deterioration is almost exclusively due to marginal failures of Dissolved Oxygen, often of 1 or 2%. The extent of these marginal failures is less in 1992 affecting approximately 128 km against 156 km in 1991. In 1992, 44% of these occurred in Hampshire.

Taking each County in turn:

#### Isle of Wight

The problem of low flow in 1991 on the Isle of Wight continued in 1992 although rainfall in the late summer and autumn reduced algal productivity. The flows in River Medina upstream of Shide Weir were increased by the use of Birchmore Farm Augmentation Borehole aiding compliance with Objective. The only failure associated with discharges was on the Ridge Brook and was due to septic tank discharges. This should be removed by a sewerage scheme currently being undertaken.

#### Hampshire

Flows in the chalk dominated rivers remained at historically low winter levels in January, February and March. The Itchen showed no sign of recovery until July and serious consideration was given to supporting the flow via the Candover Augmentation Boreholes. Flows in the Test and Itchen were lower in June than recorded in 1989, 1990 and 1991, but progressive increase in flows occurred from August to the end of the year. The flow picture was similar for the Tertiary catchments where many minor streams suffered deteriorations from Class 1A to 1B, or

from Class 1B to 2 due in most cases to Dissolved Oxygen levels below those of 1991, or slightly elevated BOD concentrations caused by algal productivity. The extent of these effects resulted in watercourses falling in Class but still complying with their 1B objectives, or falling in Class but retaining quality in a Class above their Objectives, or marginally failing their Objectives. The same phenomenon occurred on the Test at Longbridge and the Itchen at Easton.

On the credit side, the water quality in the headwaters of the River Test did not deteriorate during the spring despite the low flow due to improvements in Portals Effluent. Compliance with the 1A Objective above Whitchurch (U/S Kingfisher F.F.) occurred. Other improvements primarily resulted from Farm Inspections and the introduction of anti-pollution measures.

Following the commissioning of the new Bishops Waltham STW in 1992 with consequent improvement in water quality at Durley, the Hamble Catchment is currently subject to an extensive Farm Investigation Study.

#### Sussex

Sussex river flows were well below the average until July when some recovery in mean daily flows occurred. However monthly mean flows were still well below the seasonal norm until the extensive rainfall of November.

As in Hampshire, the prime cause of deteriorations in Class were due to low flows encouraging reductions in Dissolved Oxygen and increases in BOD. A limited number of deteriorations are believed to be due to discharges.

The NRA policy of Target Sampling Southern Water Services Ltd sewage treatment works with poor performance, reviewing discharge consents, and capital expenditure by the Company on existing and new works (eg Burgess Hill Goddards Green STW) have continued to improve Reaches. Improved quality has been recorded downstream of Petersfield STW, Liss STW, Uckfield STW and Battle STW. It is noteworthy that despite deterioration in downstream Class, improvements undertaken in 1991 at Scaynes Hill STW, Vines Cross STW, Westfield STW, Hailsham South STW, and Mayfield Meres STW still resulted in compliance with Objective.

Other improvements were due to efforts being targeted at Farms indicating the continued benefit of the Storage Regulation which came into force in 1990.

#### Kent

River flows followed a similar pattern to Sussex during 1992.

Quality improvement in the Region since 1990 continues to be the greatest in the Kentish rivers with an additional 32 km now complying with Objective since 1991. Very large expenditure by Southern Water Services Ltd on both

capital works and operational practices, and the review of discharge consent and Target Sampling of works with poor performance by the NRA have lead to these sustained improvements.

Replacement works have been built at Luxford Lane and Edenbridge, with significant improvements arising from targeting Oxted STW, Tonbridge STW, West Hoathly STW, Leeds STW, Sutton Valence STW, Tunbridge Wells South STW, Charing STW, Sellindge STW, Iden Green STW, Benenden STW, and Lenham STW. Tunbridge Wells North STW improvements allowed compliance with the downstream Objective (Class 2) despite a fall in Class from 1B to 2. And although deterioration occurred downstream of Kilndown STW to Class 1B from 1A in 1991, the refurbishment of the works resulted in the downstream quality still being better than the Objective of Class 2. The diversion of Bearsted STW from the River Len and Boughton STW from the White Drain have improved quality.

The implementation of a new Flow Release Regime for Bewl Water and increased flows in the autumn benefited the Lower Medway. The Rivers Bourne and Beult also showed better quality due to increased flow. Other improvements were recorded on the R. Dour as a result of the diversion of some 20 illegal discharges from surface water sewers into the foul sewerage system, and targeting Abattoirs on the Great Stour and Charing Stream. The Wingham River is currently subject to a catchment investigation to establish the cause of continuing low Dissolved Oxygen levels.

Marginal failures due to Dissolved Oxygen again occurred but to a lesser extent than in 1991.

The River Great Stour for most of its length complied with its Objectives, although Little Chart failed possibly due to a farm pollution, and Blackmill Bridge although complying with its Objective of 2 suffered a fall from Class 1A status recorded in 1991. Conversely Whitemill Bridge improved from Class 1B to 1A. This is believed to be due to the dispersion of effluent from Canterbury STW down the two carriers which varies with the flow regime in the River.

#### 4. Conclusion

The impact of drought on Water Quality is clearly seen on the Isle of Wight as it was in 1991. However the small catchments in tertiary areas in Hampshire have also demonstrated their vulnerability to marginal failures in 1992.

In Kent, the impact of low flows continues to distort the beneficial effects of capital investment by Southern Water Services Ltd and the efforts of the NRA in reviewing discharge consents and targeting discharges of poor performance. The improved river quality in 1992 under similar flow and weather patterns to 1991, testifies to the benefits of this approach.

In Sussex, quality has improved very slightly with capital investment by Southern water Services and NRA efforts balancing the effects of the low flows.

Marsham Sewer	Winchelsea Beach Road
Pagham Rife	Salthouse Sluice
Pannel Sewer	Watermill Cottage (D/S Guestling STW)
Par Brook	Lordings Bridge
R. Adur East	Fairplace Bridge

REASON

-----  
Robertsbridge STW Operational Improvements

Lidsey STW Improvements, Reduced Algal Productivity.

Brede STW Improvements

Henfield STW Improvements

Marginal

Recovery From Algal Pollution In 1991

Marginal

Marginal

Marginal

Increased Flow But Brackish

Marginal

Marginal

Increased Flow Reducing Duckweed Problems

Possibly Pagham STW Improved Operation

Guestling STW Operational Improvements. Target List Sampling.

Billingshurst STW Improvements

Burgess Hill Old STW diverted to New Goddards Green

SUSSEX IMPROVEMENTS AND REASONS

RIVER	SAMPLING POINT
R. Adur East	Wortleford Bridge
R. Adur West	Bay Bridge
R. Arun	Bucks Green
	Pallingham Manor (Gauging Weir)
R. Brede	A21 - Sedlescombe Street 'Roadbridge'
R. Cuckmere	Arlington Intake
	Shermans Bridge
R. Line	D/S Netherfield STW
	Riverhall 'Hoath Hill'
R. Lod	Lickfold Bridge
R. Ouse	Sheffield Park Station
R. Rother (East Sussex)	Boonshill Bridge
R. Rother (West Sussex)	B3006 Road Bridge
	Durford Bridge
	Princes Bridge
R. Uck	Isfield Mill
Socknersh Stream	D/S Gypsum Mine, Brown Oak Farm

REASON

-----  
New Goddards Green STW Commissioned

Algal Activity

Marginal

Marginal

Battle STW Refurbishment

Marginal

Marginal

Agricultural Improvement

Marginal

Marginal

Petersfield STW Improvements

Liss STW Improvements

Uckfield STW Improvements

Recovery From Agricultural Pollution In 1991

SUSSEX IMPROVEMENTS AND REASONS

RIVER	SAMPLING POINT
Stanbridge Stream	U/S Petersfield STW
Sutton Stream	Sutton Stream Road Bridge

REASON

---

Agricultural Improvements At 2 Farms

Marginal

KENT DETERIORATIONS AND REASONS

RIVER	SAMPLING POINT
Barden Mill Stream	D/S Speldhurst STW
Bartley Mill Stream	D/S Whitegates STW
Brook Farm Stream	D/S Herne Bay STW
Cradlebridge Petty Sever	B2080 Road Bridge
Eden Brook	Moat Farm
Eden Brook - Trib	Rays Bridge
Eridge Stream	Redgate Mill Farm
Felbridge Water	Outlet from Wiremill Lake
Gibbs Brook	Chat Hill
Hammer Stream - Trib	U/S Hammer Stream Confluence
Hexden Channel	Maytham Wharf
Kent Water	Hobbs Hill Farm
Leybourne Stream	U/S Snodland Paper Mill
Loose Stream	The Quarries
North/South Streams	New Cut Junction - North Stream
Pippingford Brook	Posingford Farm (B2026)
	Withyham

REASON

Met Objective Class

Deterioration To Class 1B But Still Above Objective Class 2

Met Objective Class

Unknown But Probably Agricultural Pollution

Met Objective Class

Illegal Agricultural Activity. Under Investigation.

Met Objective Class

Algal Productivity In Wiremill Lake Upstream

Marginal But Godstone STW May Contribute

Under Investigation

Algal And Duckweed Problems

Met Objective Class

Believed To Be Due To Influence Of Gravel Pit Discharges

Marginal

Possibly From Farm Pollution

Marginal

Marginal

KENT DETERIORATIONS AND REASONS

RIVER	SAMPLING POINT
R. Bourne	D/S Hadlow STW
R. Great Stour	Blackmill Bridge
	Little Chart
R. Medway	Balls Green, Withyham
R. Teise	Goudhurst Intake
R. Teise - Trib	D/S Kilndown STW
Reading Sewer	Stone Ferry
Rhoden Stream	D/S Paddock Wood STW
Royal Military Canal	Appledore
	Bilsington
	Seabrook Sluices
	West Hythe
Royal Military Canal Trib	D/S Appledore STW
Sissinghurst Stream	D/S Sissinghurst STW
	U/S Hammer Stream Confluence
Somerhill Stream	The Postern
Speringbrooke Sewer	At Royal Military Canal

REASON

Overflows From Blockages Of Foul Sewerage System. Being Resolved.

Low Flows Affecting Distribution Of Canterbury STW Effluent

Possibly From Farm Pollution

Met Objective Class

Marginal

Deterioration To Class 1B But Still Above Objective Class 2

Impounded Water And Algal Problems

Paddock Wood STW Impact. Slow Flow. High Algal Productivity.

Agricultural Pollution

Marginal

Met Objective Class

Marginal

Appledore STW

Met Objective Class

Marginal
